UNDEREXPOSED (-2 STOPS ND 06)

Comparison with

DIMMER @ 25%

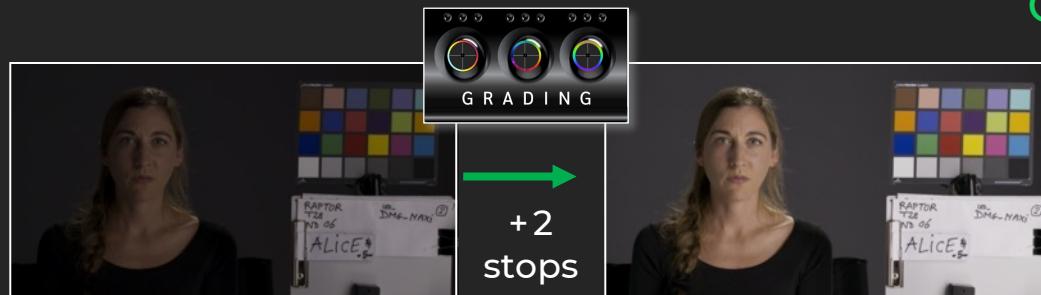

## UNDEREXPOSED (-2 STOPS ND 06) Comparison with

Pour vérifier si les gradateurs des projecteurs sont fiables, nous avons fait une comparaison entre deux plans sous-exposés :

- Le premier avec un filtre ND 06
- Le second en diminuant la puissance sur le projecteur à 25%, ce qui entraîne automatiquement une différence d'exposition sur les fonds.

De ce fait, le visage devient la seule référence à comparer.

Pour ramener la correction d'exposition au keylight, on a travaillé en offset en équivalent points de lumière de tirage.

UNDEREPOSED  
(-2 STOPS ND 06)

Back to Keylight

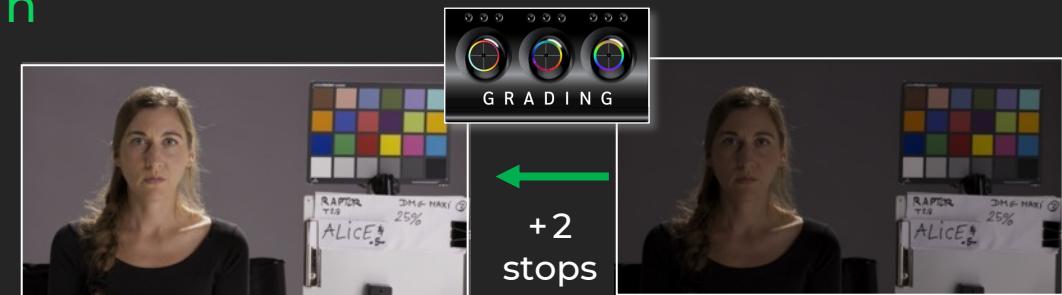

## DIMMER @ 25%

To check whether the projectors' dimmers are reliable, we compared two underexposed shots:

- The first with an ND 06 filter
- The second by dimming down the power on the projector to 25%, which automatically results in a difference in exposure on the backgrounds.

As a result, the face becomes the only reference to compare. To correct the exposure up to the keylight, we worked in offset like with printer light points.

## CIE 13.3-1995 CRI Color Rendering Index

**R<sub>a</sub>** est la valeur de l'indice de rendu des couleurs basé sur la valeur moyenne des 8 premières couleurs de test. C'est la Valeur CRI usuelle.  
La valeur **R<sub>e</sub>** peut être trouvée dans l'annexe des mesures.

**R<sub>a</sub>** is the color rendering index value based on the average of the first 8 test colors.  
This is the usual CRI value.  
The **R<sub>e</sub>** value can be found in the appendix of the measurements.

## IES TM-30-18 <https://webstore.ansi.org/standards/iesna/ansiestm3020>

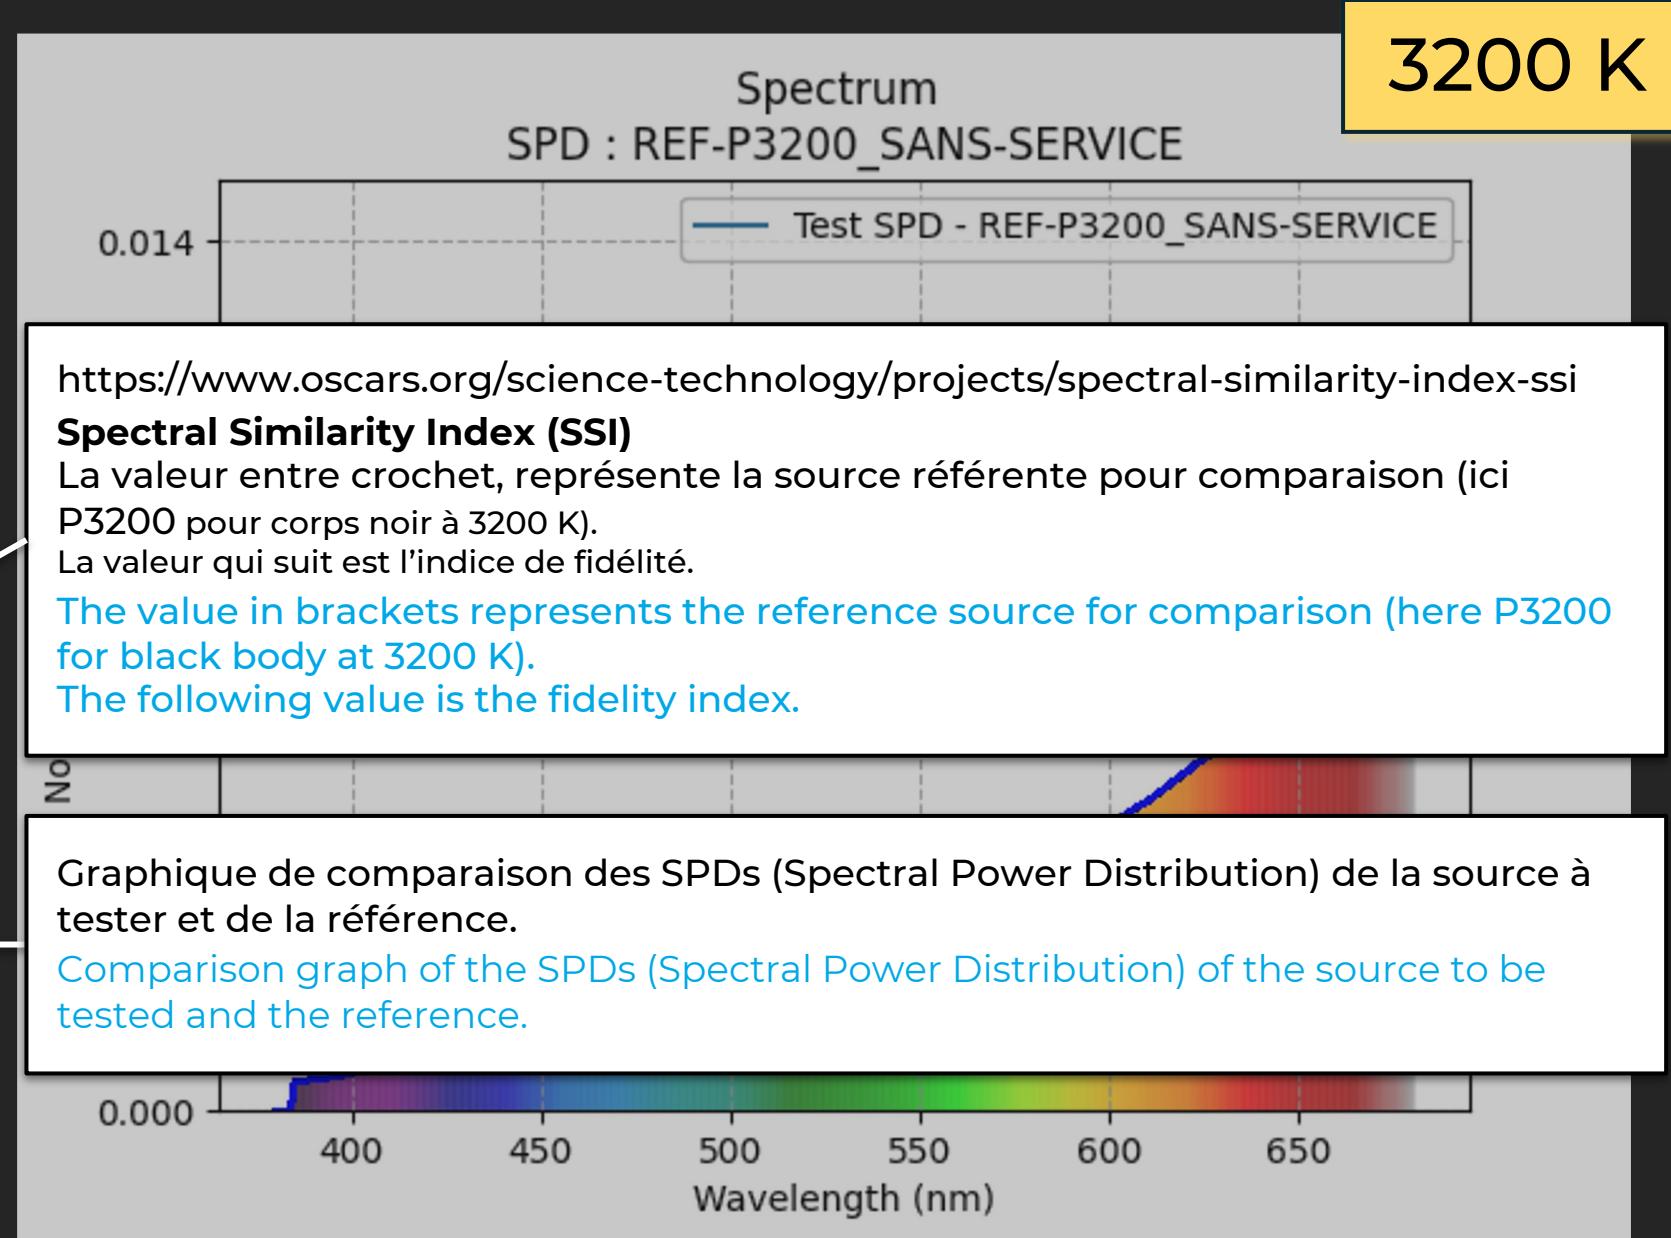

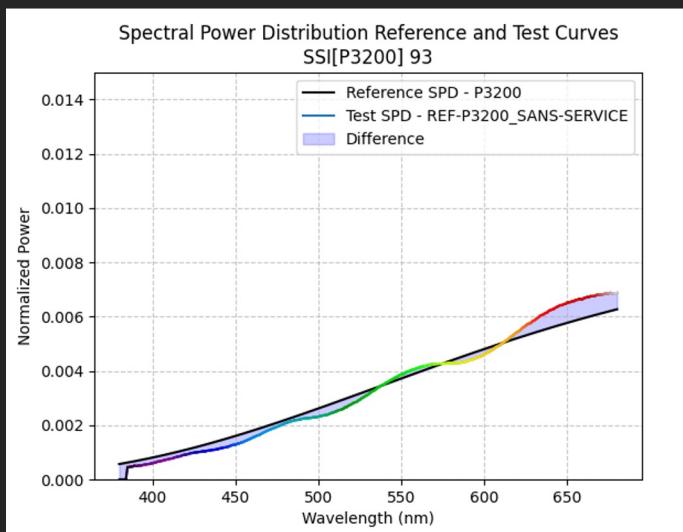

Color fidelity **R<sub>f</sub>** mesure la ressemblance ou la dissimilarité des couleurs aux couleurs références (similaire au CRI).

Gamut **R<sub>g</sub>** Donne le niveau de saturation de la couleur. Les valeurs inférieures à 100 indiquent une saturation inférieure à la référence.

Color fidelity **R<sub>f</sub>** measures the similarity or dissimilarity of colors to the reference colors (similar to CRI).

Gamut **R<sub>g</sub>** indicates the level of color saturation. Values below 100 indicate a saturation lower than the reference.

# SSI REFERENCE Daylight Locus

CIE illuminant D55\*  $\approx$  5503,0598 K

Le SPD de référence utilisé dans cette partie est basé sur l'illuminant standardisé CIE D55. Sa température en Kelvin est de 5503 K environ. Le calcul SSI est donc effectué avec cette référence, bien que les sources à tester aient été réglées sur 5600 K.

Vous trouverez en annexe métrologie les mêmes calculs SSI basés sur un illuminant "Daylight locus" à 5600 K ainsi que sur les valeurs de cct mesurées. Les indices SSI sont similaires.

The reference SPD used in this section is based on the standardized CIE D55 illuminant. Its temperature in Kelvin is approximately 5503 K. Therefore, the SSI calculation is performed with this reference, even though the test sources were set to 5600 K. In the metrology appendix, you will find the same SSI calculations based on a "Daylight locus" illuminant at 5600 K as well as on the measured CCT values. The SSI indices are similar.

Comparison chart: SSI vs TM30-20 vs CRI

# TM-30-20

Toutes les données de cette partie dédiée au TM-30-20 ont été calculé avec le JETI.

Vous trouverez :

- les graphiques et résultats (incluant  $R_f$  &  $R_g$ ) du projecteur réglé à 100% de sa puissance à l'aide du JETI
- un tableau comparatif SSI / TM-30-20 / CRI.

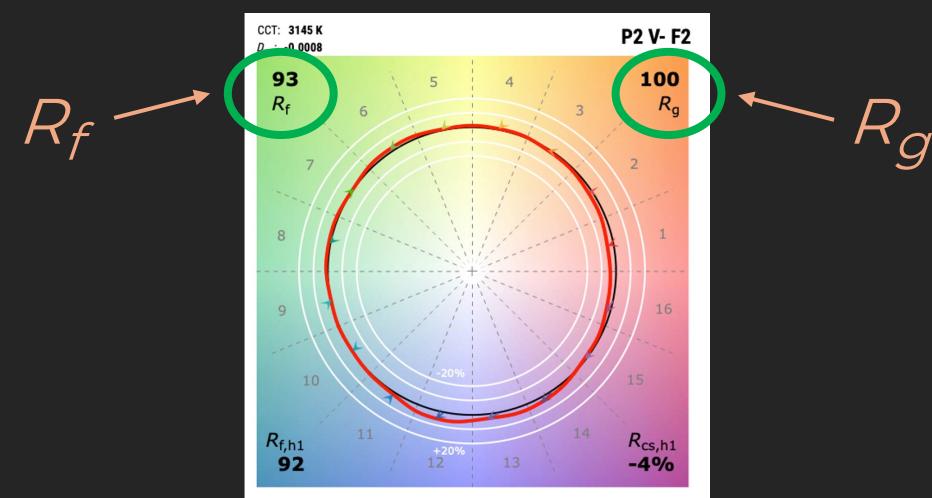

Toutes les mesures sont données en 3200 K et en 5600K

All the data in this section dedicated to the TM-30-20 has been calculated using JETI.

You will find :

- graphs and results (including  $R_f$  &  $R_g$ ) for the lighting fixture set at 100% power using JETI
- a table comparing SSI / TM-30-20 / CRI.

All measurements are provided in 3200K and 5600K

JETI

## TM-30-20

Dans le fichier JTL 2O consacré aux données TM-30-20 vous trouverez :

Full Color (RGB - Large spectrum)				
Number of color diodes	6	Types	R, G, B, A L, W	
Color temperature range		1700 K	-	10000 K
Color temperature preset	Yes		No	
Green Magenta Control	Yes		No	
Saturation Hue Adjustment	Yes		No	
Gels preset	Yes		No	
Camera profiles LUTs	Yes		No	
Color spaces	Yes		No	

Color index	CRI	94+ across white range
	TLCI	
	TMA 30-18/20 - Rf	TMA 30-18/20 - Rg
	SSI [P3200]	SSI [CIE D55]

Other specificities	
---------------------	--

Operating temperatures	From - XX°C to +XX°C	From XX F to XXX F
Fan:	Yes	No
Switchable		
If switchable, % of light output	Yes	No
Noise level in dB at 1 m		
High speed possibility	Yes	No
Maximum speed		
Camera shutter possibility	Yes	No
Maximum angle		
Operating positions	All	No: limitations: Spigot diameter

Memory of settings	Yes	No	Wireless DMX compatibility	Yes	No
Built in Lumen radio protocol				Yes	No
Wired DMX compatibility	Yes	No	Maximum distance		
Master/Slave: for synchronising multiple units				Yes	No
Native apps	Yes	No	Apps compatibility	Yes	No
Which ones?					
Color shifts when dimming			Yes	No	
Change of light levels when selecting CT			Yes	No	

Environmental concern	
Warranty (in years)	3
For how long parts are available?	10 years minimum
Average repair time	1 day
What do you know about recycling your products?	They are all still working !
Do customers send them back to you or do they take care of it themselves?	Products still working
Country of manufacturing	China, but will be France for DMG LION

Températures des couleurs en Kelvin

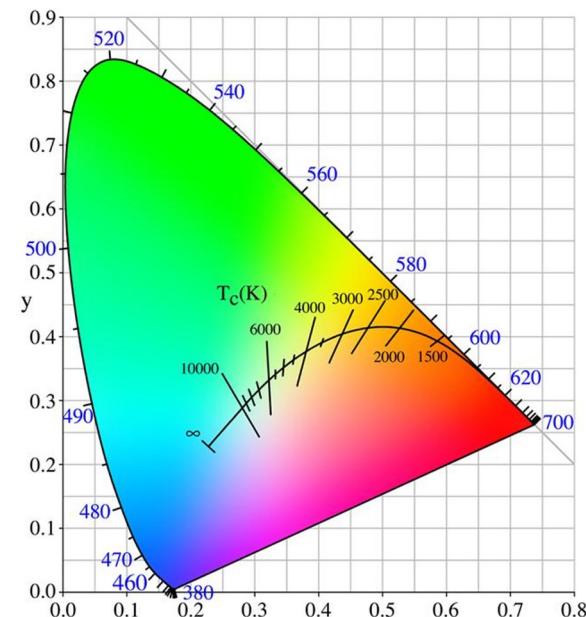

La température de couleur est la valeur cible idéale que nous cherchons à atteindre pour faire les mesures (3200 ou 5600). Celle-ci est basée sur la CCT et son unité est donc le Kelvin (K). La valeur peut être donnée directement par le projecteur ou réglée et ajustée avec les mesures prises par le spectroradiomètre JETI 1511 HiRes.

The color temperature is the ideal target value we aim to achieve for measurements (3200 or 5600). It is based on the CCT and its unit is Kelvin (K). The value can be directly provided by the projector or set and adjusted using the measurements taken by the JETI 1511 HiRes spectroradiometer.

La CCT ou température de couleur corrélée, est la température précise d'un radiateur de Planck (corps noir) ayant la chromaticité la plus proche possible de celle associée à une distribution spectrale donnée. La CCT est donc calculée à partir de la distribution spectrale (SPD) de la source lumineuse ; Elle utilise comme unité standard le Kelvin (K). La CCT seule ne suffit pas pour définir précisément les coordonnées chromatiques ( $x$ ,  $y$  ou  $u'$ ,  $v'$ ) d'une couleur, il faut également le Duv.

CCT, or correlated color temperature, is the precise temperature of a Planckian radiator (black body) that has a chromaticity as close as possible to that associated with a given spectral distribution. CCT is calculated from the spectral power distribution (SPD) of the light source; it uses Kelvin (K) as the standard unit. CCT alone is not sufficient to precisely define the chromatic coordinates ( $x$ ,  $y$  or  $u'$ ,  $v'$ ) of a color, Duv is also required.

------------------------------------	--------	-------	-----	---	---	-----

Le Duv ou Delta u,v est utilisé pour décrire la distance entre les coordonnées chromatiques de la source de lumière et le radiateur de Planck, appelé également lieu du corps noir. Une valeur négative indique que la source est en dessous de la courbe du corps noir (dominante magenta ou rose), une valeur positive indique que la source est au-dessus de la courbe du corps noir (dominante verte ou jaune). L'EBU TECH 3355 préconise une valeur limite de viabilité à la CCT (différence juste perceptible) de 0,0054, l'ANSI une valeur de +-0,006.

Duv or Delta u,v is used to describe the distance between the chromatic coordinates of the light source and the Planckian radiator, also known as the black body. A negative value indicates that the source is below the black body curve (magenta or pink tint), while a positive value indicates that the source is above the black body curve (green or yellow tint). The EBU TECH 3355 recommends a perceptibility threshold at the CCT (just noticeable difference) of 0.0054, while ANSI recommends a value of +-0.006.

Le système de coordonnées CIE xy 1931 est dérivé du système CIE XYZ. Les valeurs x et y sont des coordonnées cartésiennes qui permettent de définir précisément une couleur, sans toutefois prendre en compte sa luminance.

The CIE 1931 xy coordinate system is derived from the CIE XYZ system. The x and y values are Cartesian coordinates that allow for precise color definition, without considering its luminance.
