

Journée Très LEDs

De beaux tests à faire

Les buts, la théorie & les images

JTL 2

**CST**

Be4Post

The icseyes services logo consists of a yellow circular icon with radiating lines, followed by the word "icseyes" in yellow lowercase letters and "services" in smaller black lowercase letters.

**Magic Hour**  
Que vos projets deviennent réalité

A Bright LED day

Brilliant tests on the horizon

Goals, theory & images

## But des ces essais / Goal of these tests

- Partie théorique
  - ✓ Les LEDs et la chaîne numérique
  - ✓ Comprendre le métamérisme
  - ✓ Se familiariser avec les spectres
  - ✓ Promouvoir le SSI (Spectral Similarity Index)
  - ✓ Connaître le test Esmeralda
- Partager les résultats de métrologie de la CST
  - Theoretical part
    - ✓ LEDs and digital workflow
    - ✓ Understanding metamerism
    - ✓ Becoming familiar with spectra
    - ✓ Promoting the SSI (Spectral Similarity Index)
    - ✓ Knowing the Esmeralda test
  - Share CST metrology results

## Les comparaisons entre les différents appareils de mesure

- Le but de cette métrologie était aussi de comparer les mesures entre un appareil de laboratoire (JETI) et des appareils de terrain (Sekonic & Gossen)

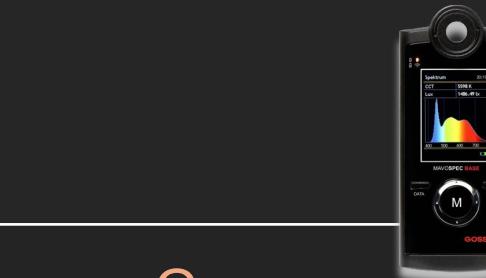

## Comparisons between different measuring equipment

- The aim of this metrology was also to compare measurements between a laboratory instrument (JETI) and field instruments (Sekonic & Gossen)

Mesures prises avec :  
Measurements taken with:

JETI 1511  
HiRes (JTI)

Gossen  
Mavospec Base (GSN)

Sekonic  
C800

Pourquoi tester à différentes puissances ? 100%, 50%, 25% ?

Why test at different power levels?  
100%, 50%, 25%?

- Dans le passé, on a souvent pu constater des différences de température de couleur et d'index de qualité lors des changements de puissance

- In the past, we have often seen differences in colour temperature and quality index when changing power.

Données relatives à : Data related to:	Power @ 100% indicated by the LED	Power @ 100% indicated by JETI	Power @ 50% indicated by JETI	Power @ 25% indicated by JETI
---	---	--------------------------------------	-------------------------------------	-------------------------------------

## Partie théorique / Theoretical part

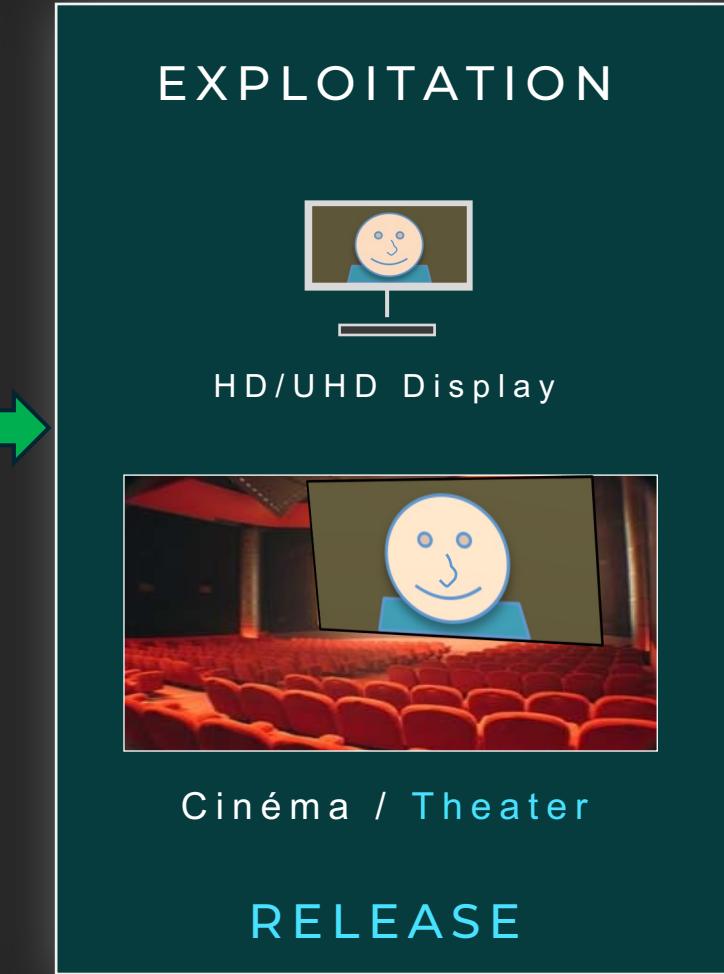

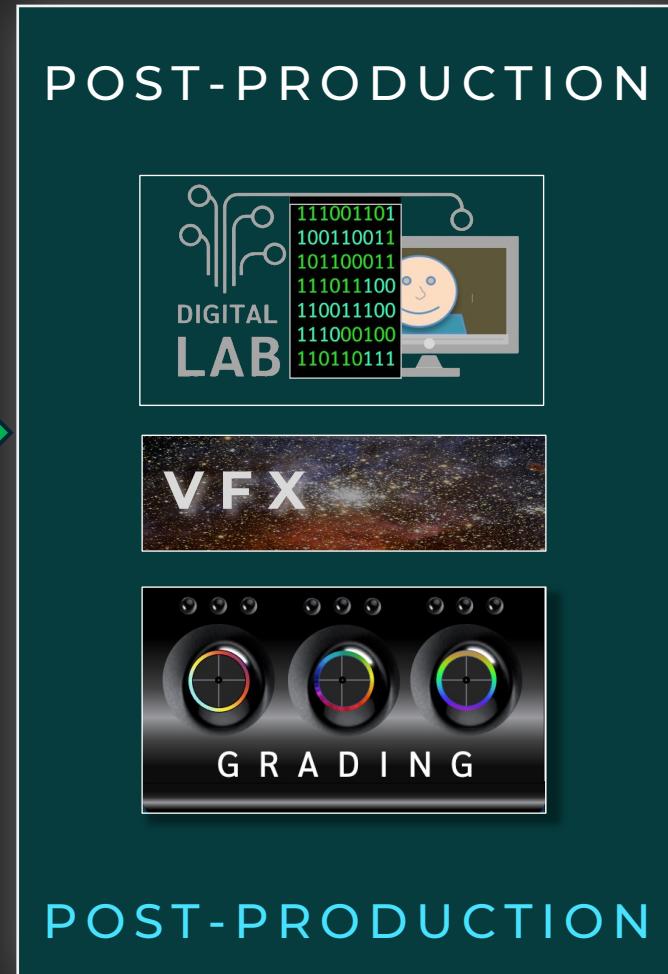

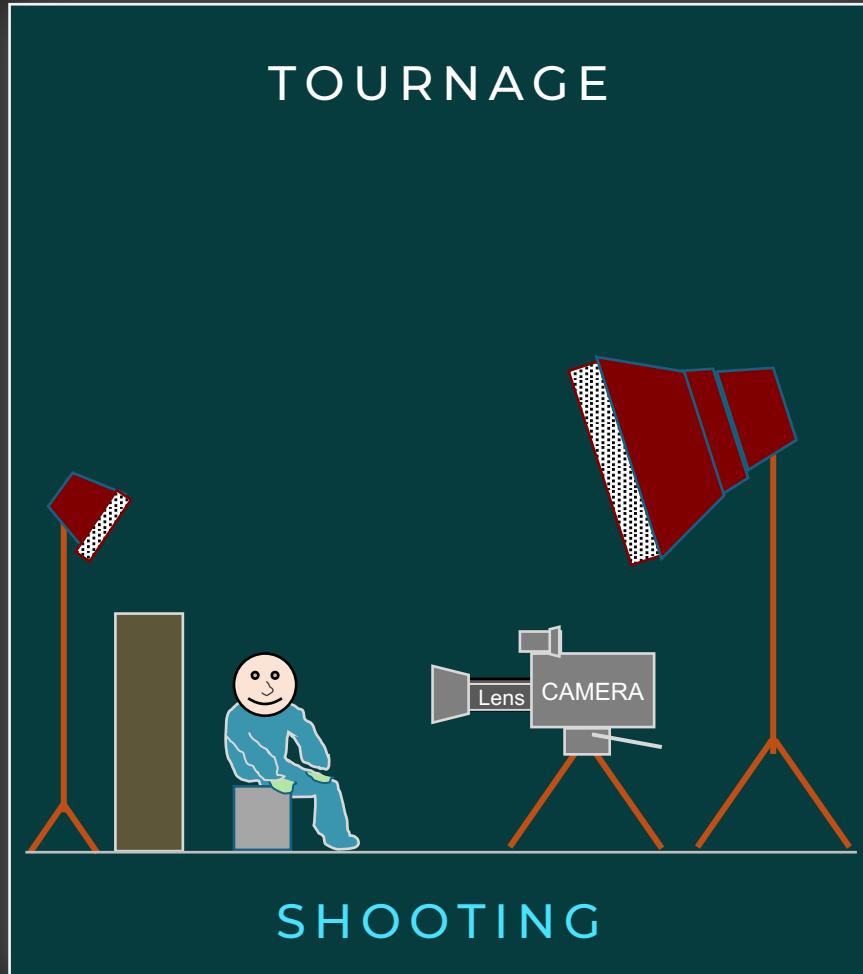

TESTER LES NOUVEAUX OUTILS DANS  
LE CADRE DE LA CHAÎNE NUMÉRIQUE

/

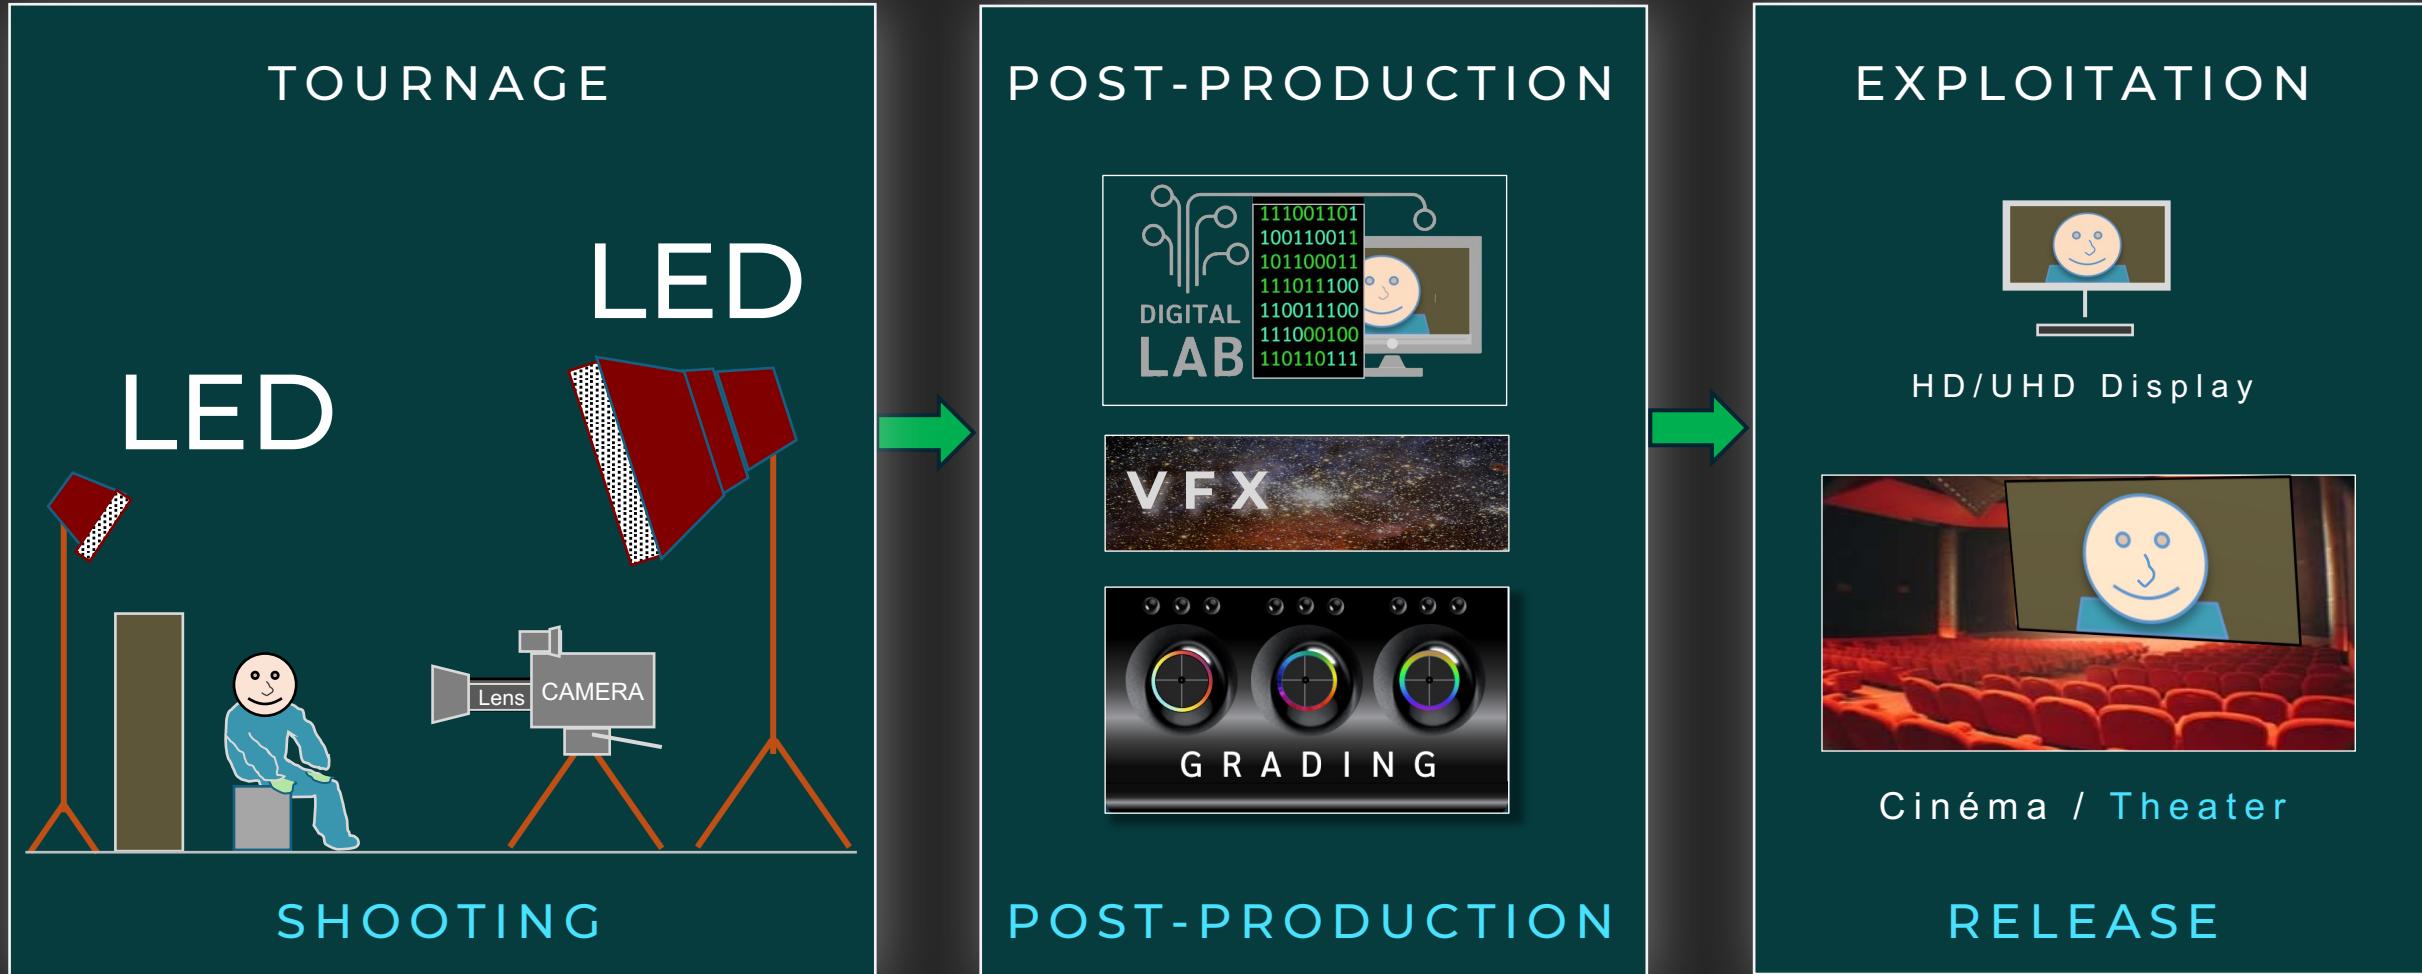

TESTING NEW TOOLS AS PART OF THE DIGITAL WORKFLOW

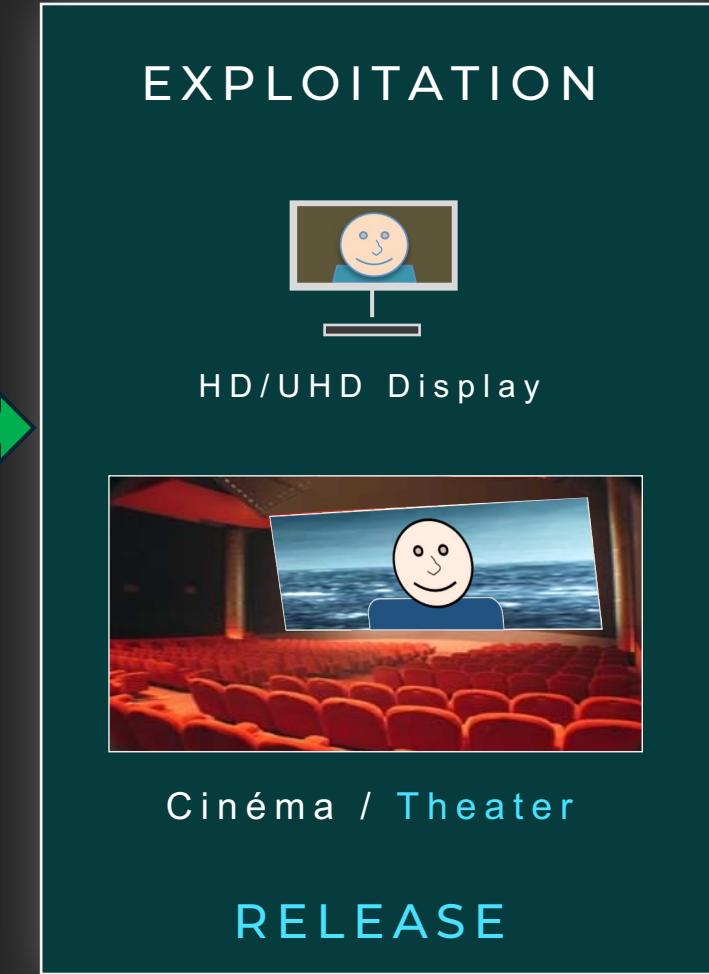

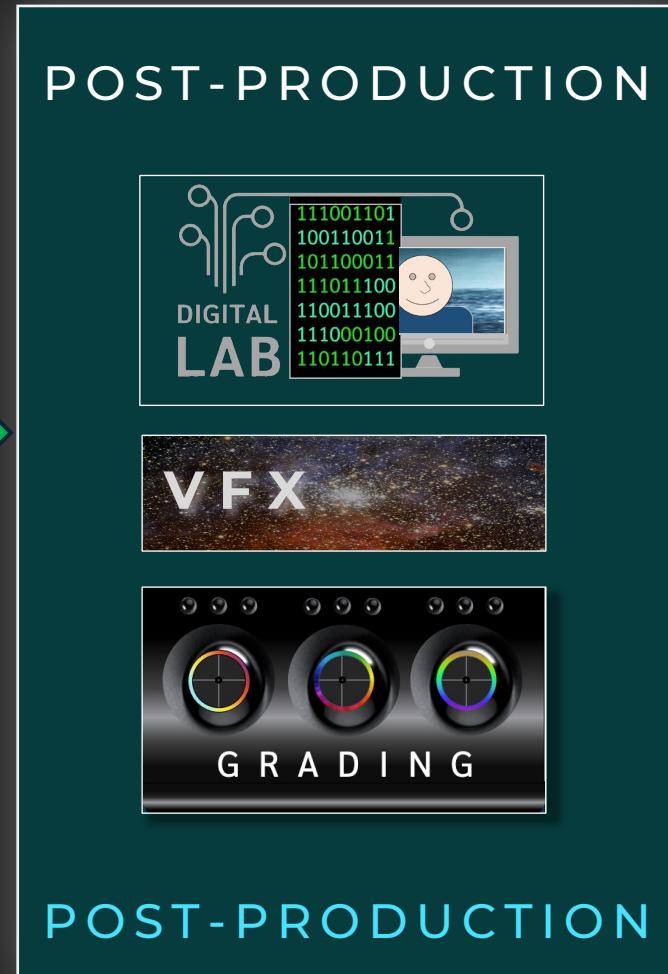

# Chaîne numérique / Digital workflow

# Chaîne numérique / Digital workflow

# + Production virtuelle / + Virtual production

## L'IMPORTANCE DE L'ÉTALONNAGE POUR JUGER LES LEDS

THE IMPORTANCE OF COLOR GRADING TO JUDGE LEDS

## Le rôle de la post-production / Role of the post-production

- **Axiomes de base**

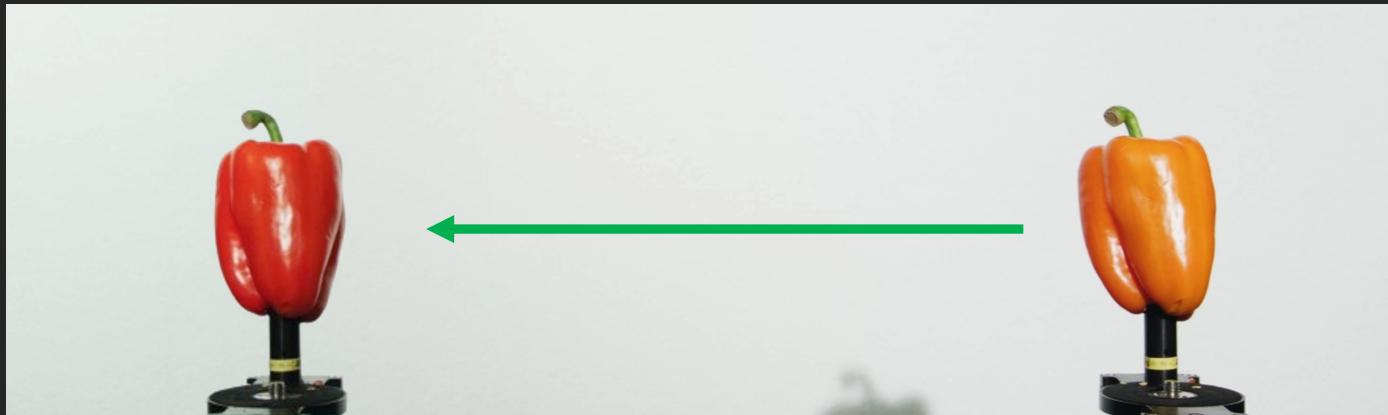

- Considérer le flux de travail comme un tout, et le résultat comme la seule norme
- Considérer la postproduction comme la tour de contrôle de la chaîne numérique
- Considérer comme essentielle l'implication de la postproduction et du coloriste pour juger de la qualité des LEDs

- **Basic axioms**

- Viewing the workflow as a whole, and the result as the only standard
- Considering the postproduction as the control tower of the workflow
- Highly rating both postproduction and colorist's involvement to judge the quality of LEDs

COMPRENDRE LE MÉTAMÉRISME  
/  
UNDERSTANDING METAMERISM

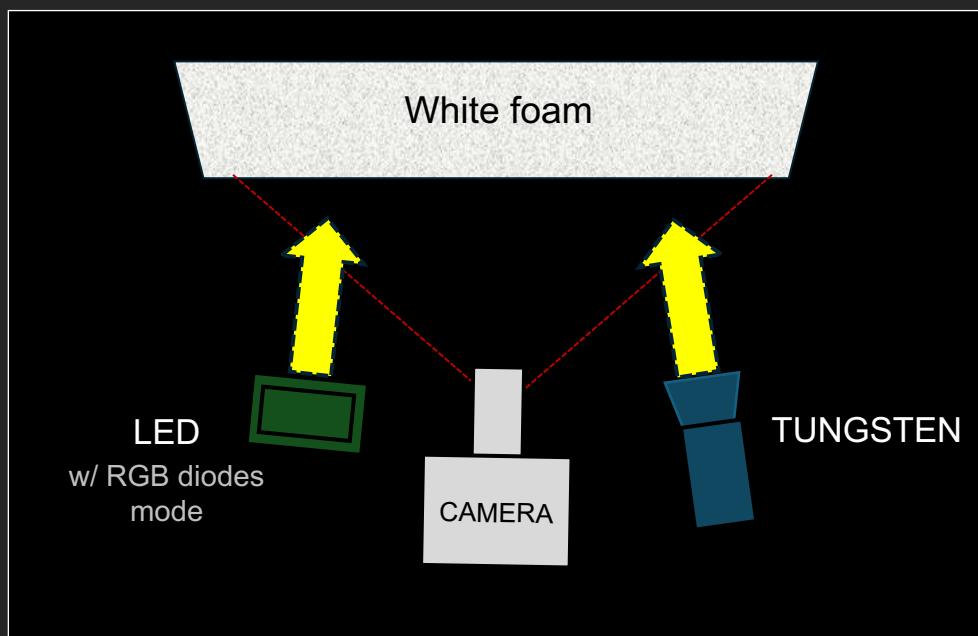

[CST LINK](#)

## Comprendre le métamérisme / Understanding metamerism

- Le métamérisme décrit le phénomène selon lequel deux spectres différents créent la même perception visuelle.
- Metamerism describes the phenomenon when two different spectra create the same visual perception.

Polystyrène blanc uniformément éclairé :

- à droite par un projecteur tungstène
- A gauche par un projecteur LEDs dont seules les diodes RVB sont activées.

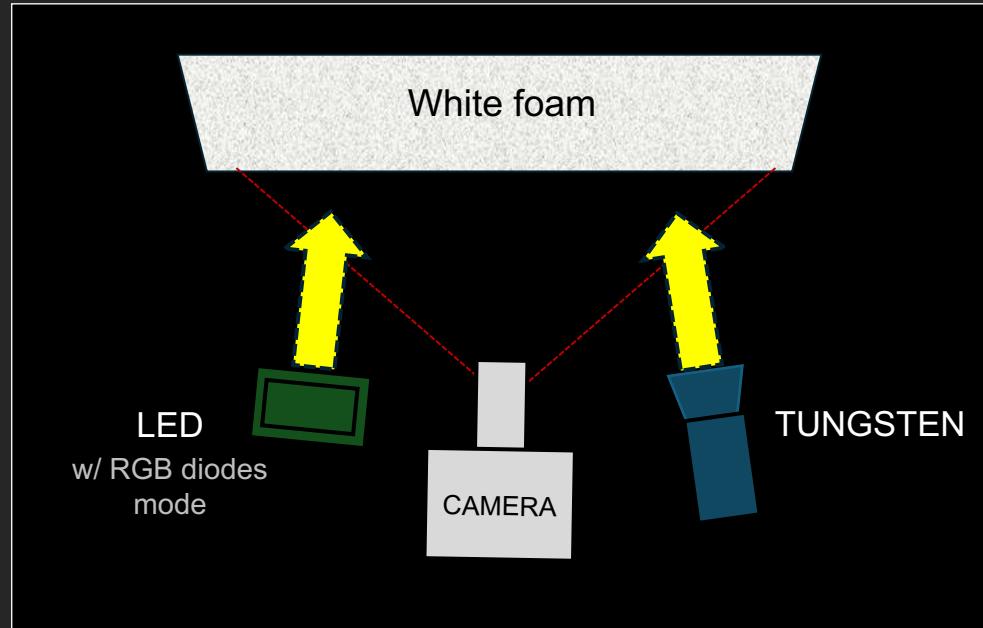

White foam uniformly lit:

- on the right by a tungsten lighting fixture
- on the left by a LED with only R, G, B diodes

## Comprendre le métamérisme / Understanding metamerism

Polystyrène blanc uniformément éclairé :

- à droite par  
UN SPECTRE CONTINU

White foam uniformly lit:

- on the right by  
A CONTINUOUS LIGHT SPECTRUM

- à gauche par  
UN SPECTRE DISCONTINU

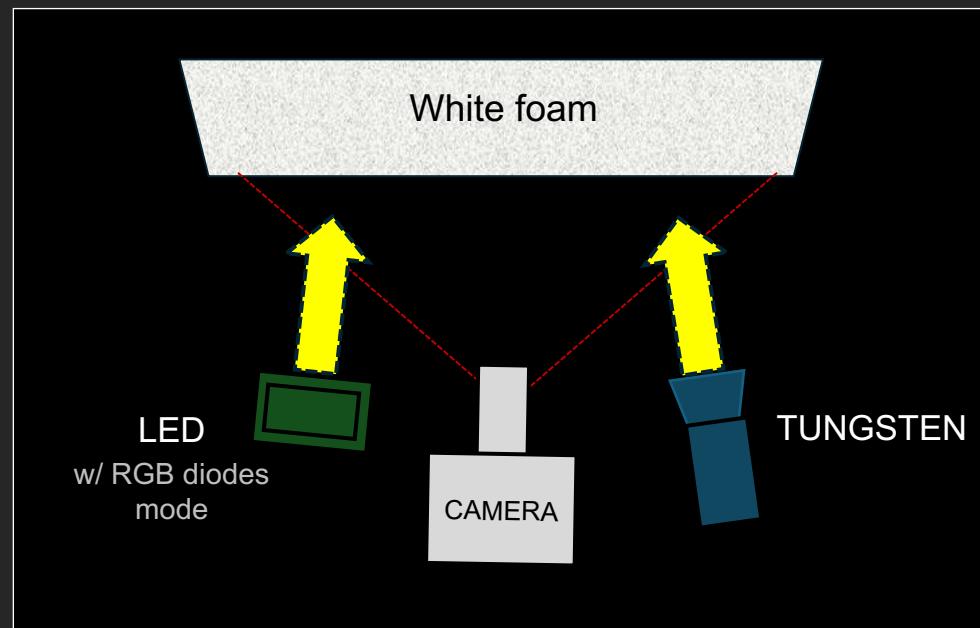

- on the left by  
A DISCONTINUOUS LIGHT SPECTRUM

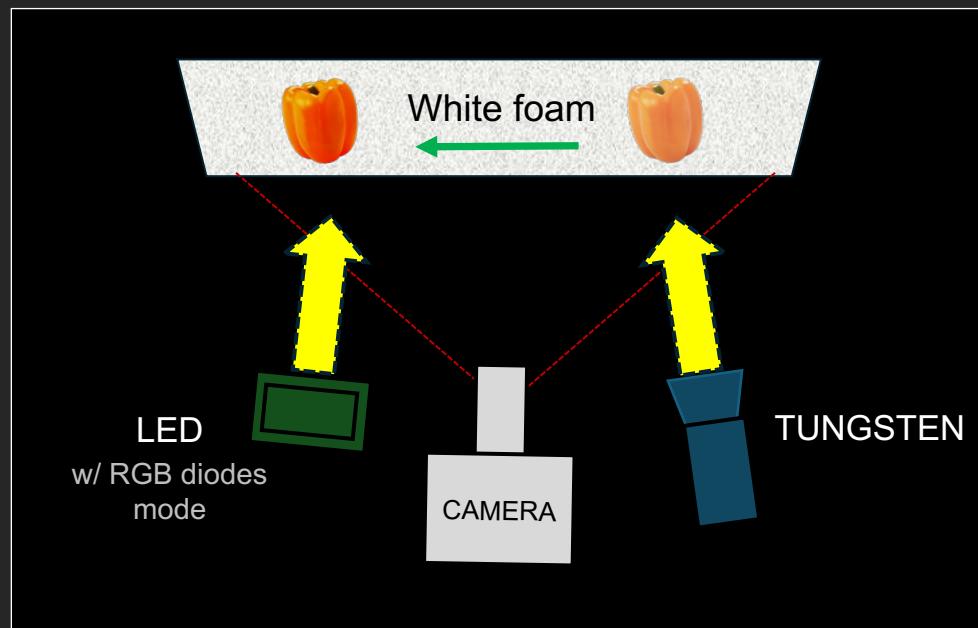

## Correspondance Métamérique / Metameric match

- Entre les spectres émis par la lampe au tungstène et les LEDs,
- Lorsqu'ils sont réfléchis par le polystyrène blanc.
- Notre œil ne fait pas la différence entre les deux flux lumineux.
- Between the two emitted spectra from the tungsten and LED lights,
- When they were reflected by the white Styrofoam.
- Our eyes can't tell the difference between the two luminous fluxes.

## Échec Métamérique / Metameric Failure

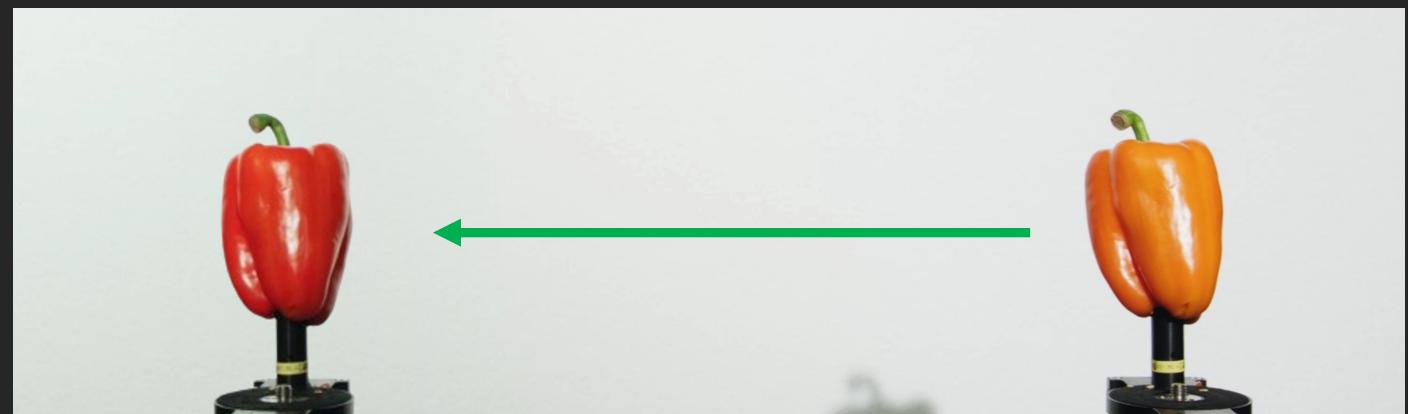

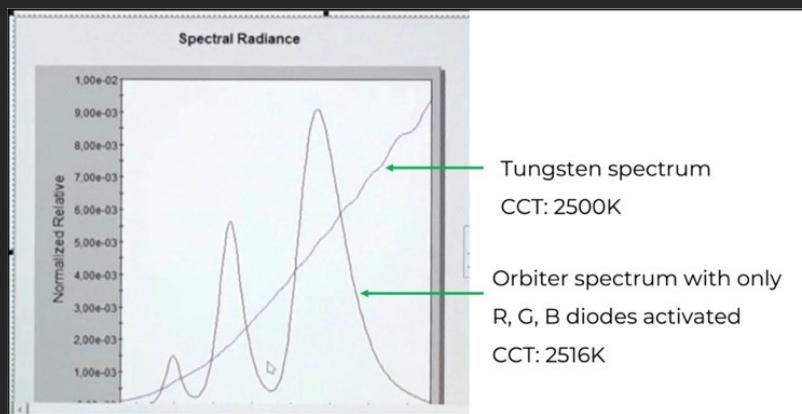

- Lorsqu'ils sont reflétées par un poivron orange par exemple.
- When they were reflected by an orange bell-pepper for example.

## Échec Métamérique / Metameric Failure

- Le poivron passe de l'orange, sa couleur naturelle dans la lumière tungstène au rouge dans la lumière LEDs en mode RVB (les diodes ambre et blanc n'ont pas été activées sur l'Orbiter)
- The bell pepper goes from orange, its natural color in tungsten light, to red in LED light in RGB mode (amber and white LED diodes have not been activated on the Orbiter)

Clip: <https://www.youtube.com/watch?v=DruLvVyEL6s&list=PLW8aVswX2z2Y6fVtZuJdpemmqLPavU5if&index=3>

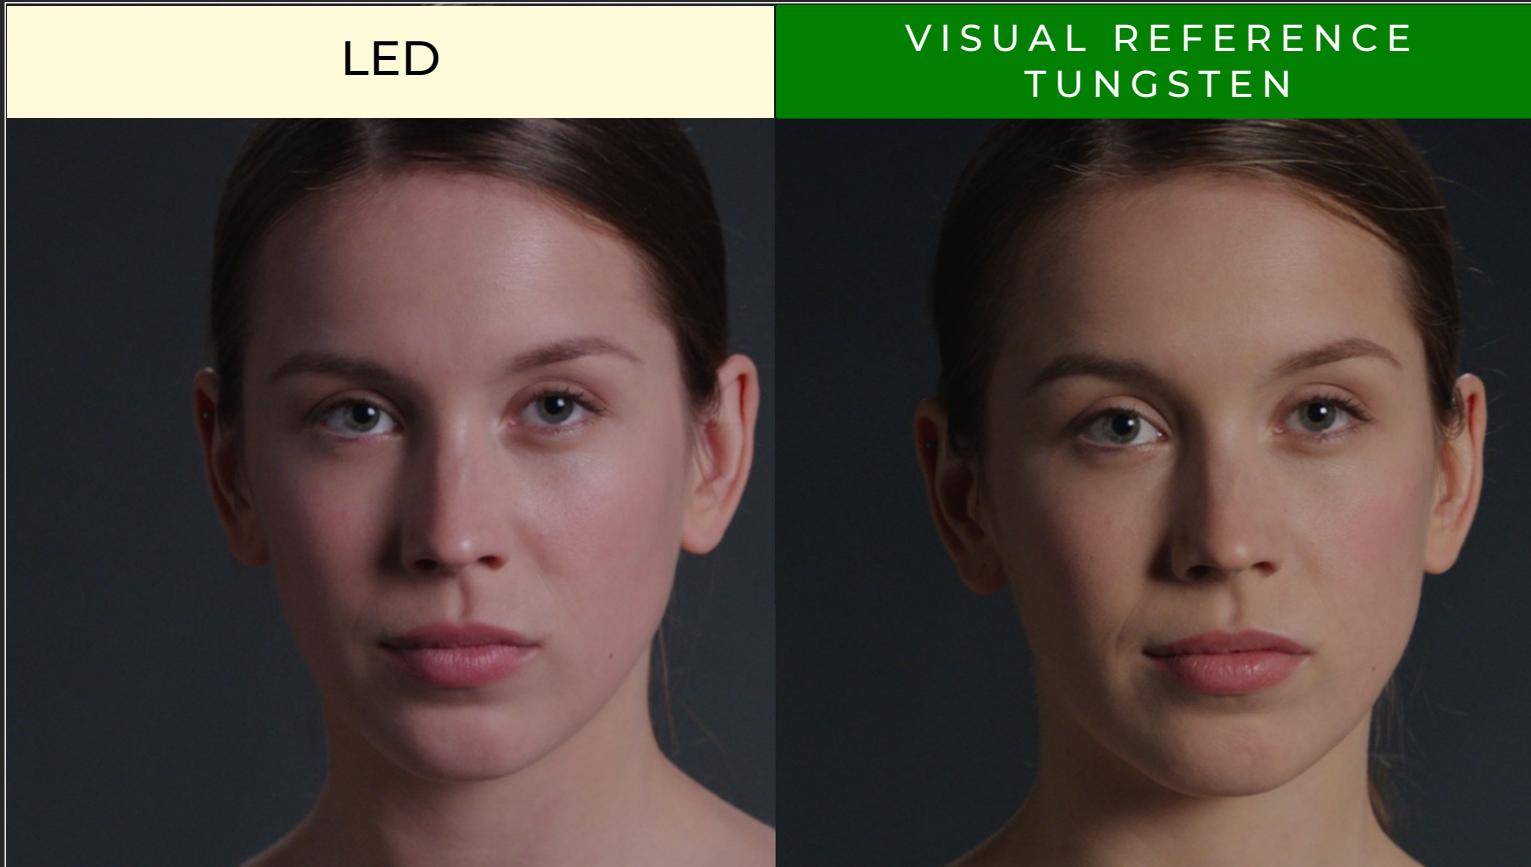

## Échec Métamérique / Metameric Failure

- En raison de leurs spectres discontinus, certains LEDs provoquent souvent des défaillances métamériques.
- Due to their discontinuous spectra, some LED lighting fixtures often cause metameric failures.

## Échec Métamérique / Metameric Failure

- Effets sur les couleurs de peau !
- Effect on skin colors!

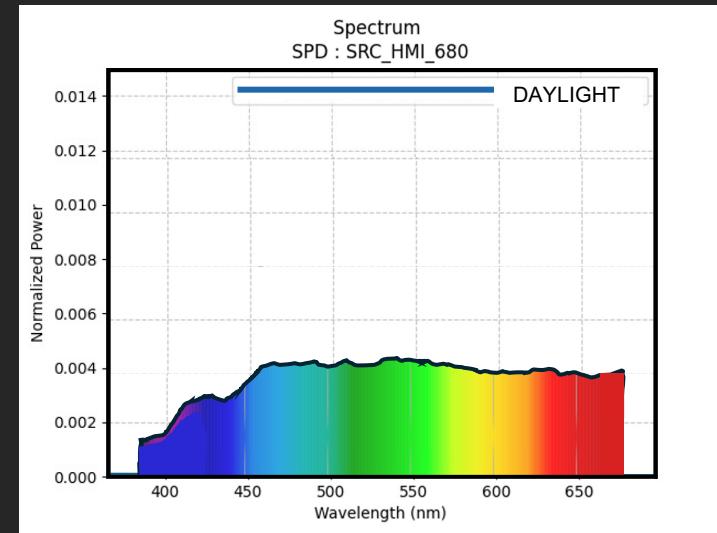

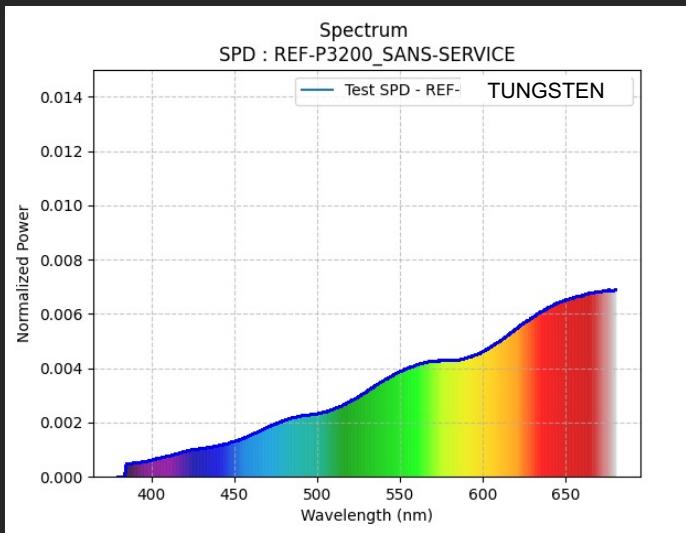

3200 K

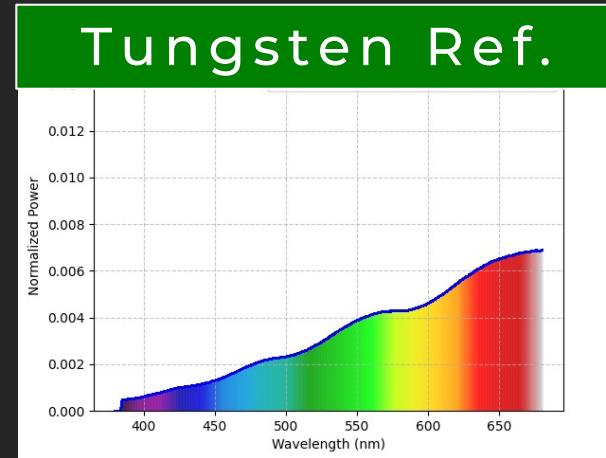

# SE FAMILIARISER AVEC LES SPECTRES DE COULEUR

/

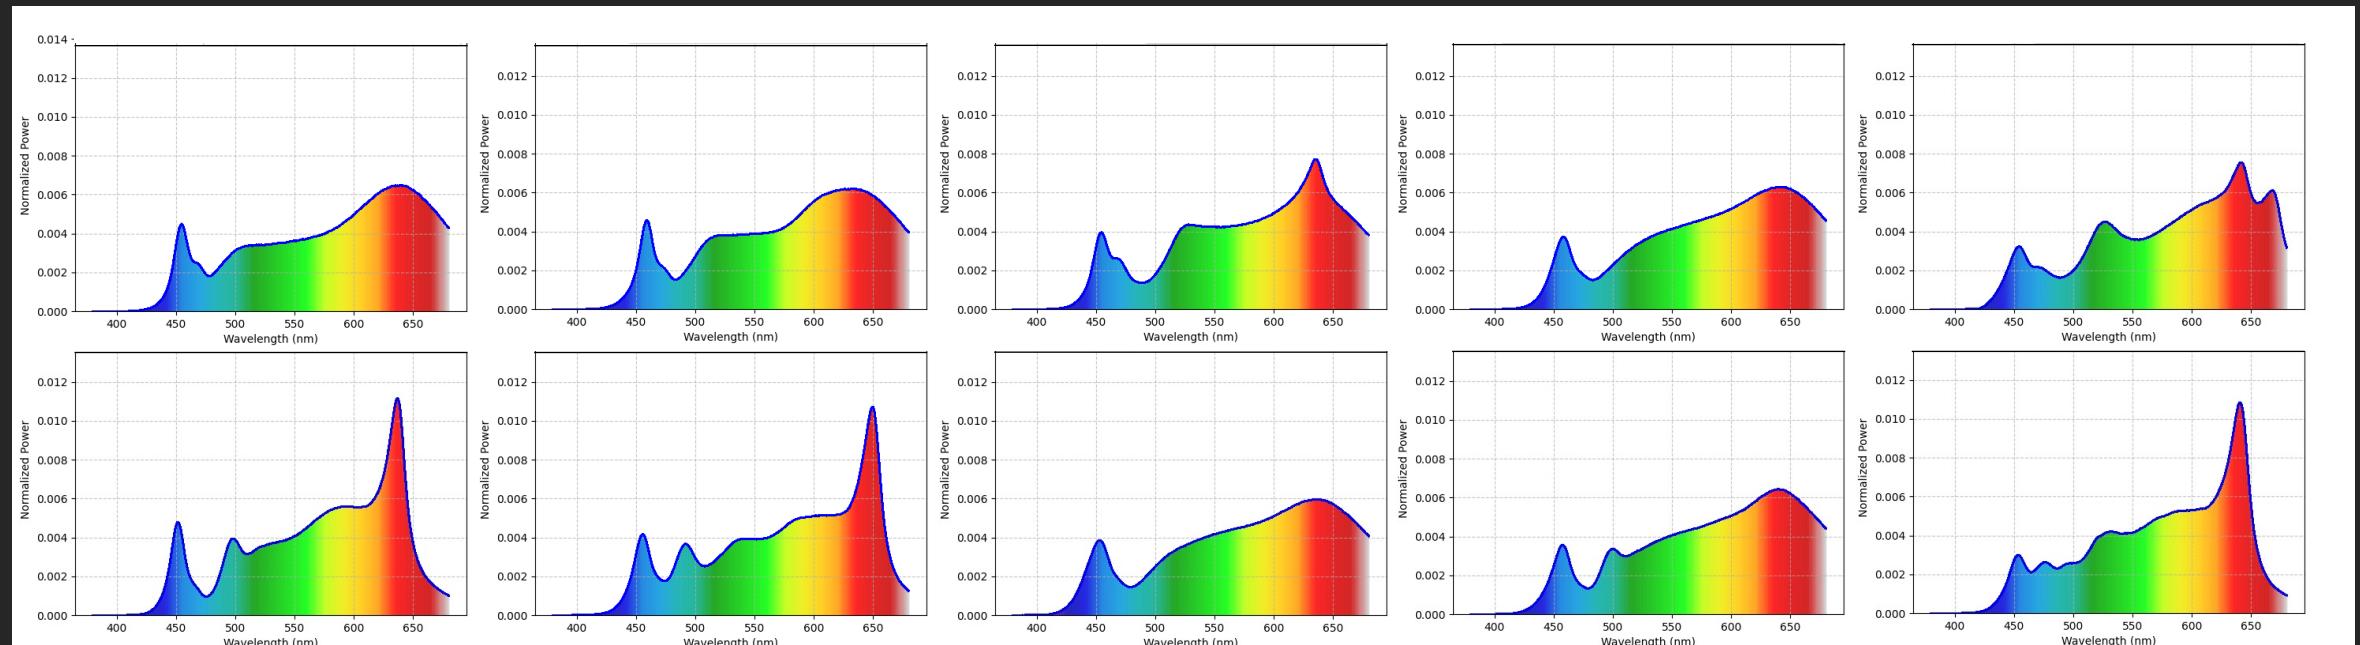

## BECOMING FAMILIAR WITH COLOR SPECTRA

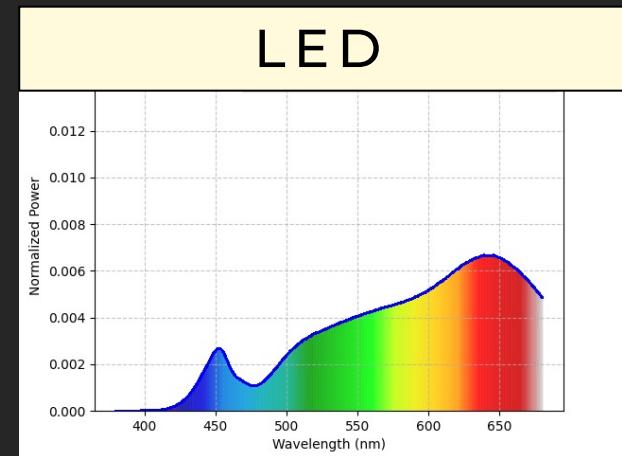

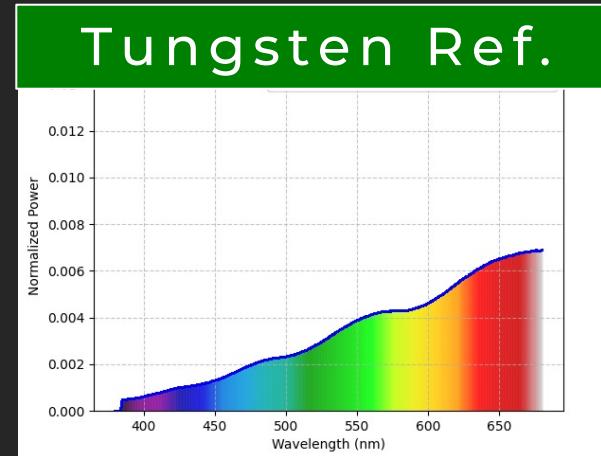

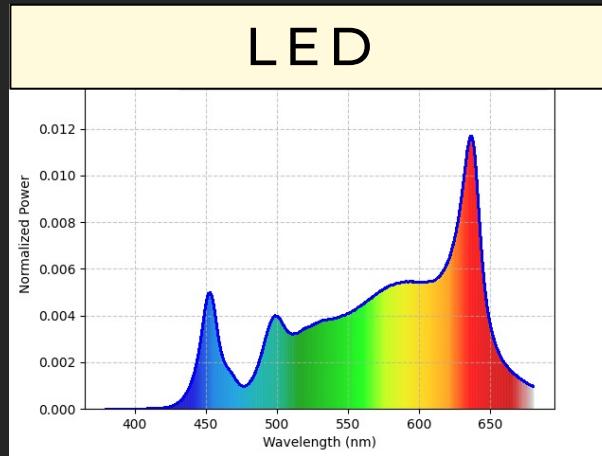

Quelle forme de spectre faut-il privilégier ?

What form of spectrum should be preferred?

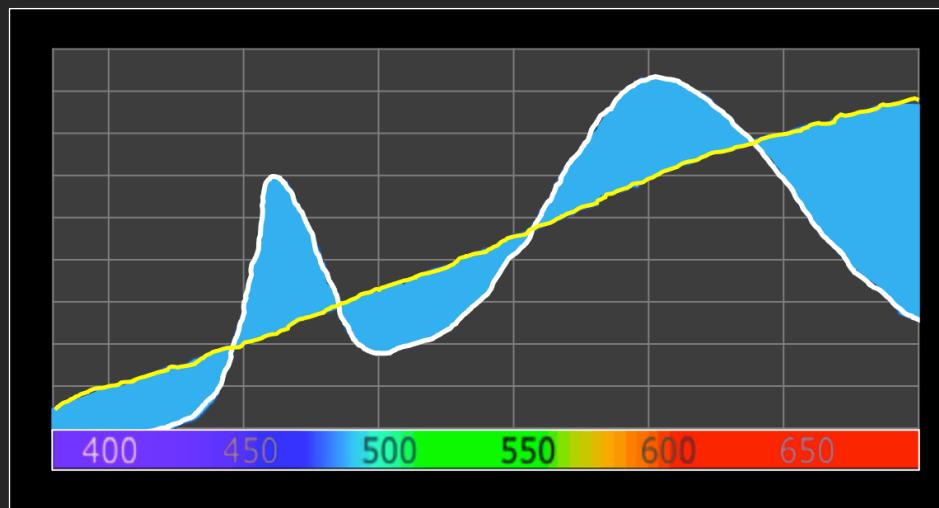

- Idéalement, la distribution du spectre doit être continue et aussi lisse que possible, sans pics ni creux particuliers.
- La largeur du spectre est également un paramètre important.

- Ideally the spectrum distribution should be continuous as smooth as possible, with no important peaks or dips
- The width of the spectrum is also an important parameter.

PROMOUVOIR LE SSI (SPECTRAL SIMILARITY INDEX)

/

PROMOTING THE SSI (SPECTRAL SIMILARITY INDEX)

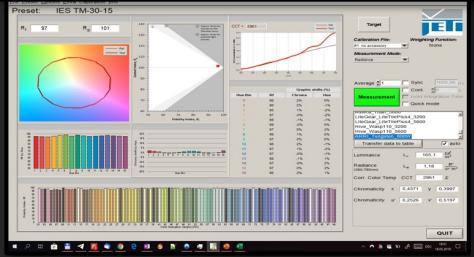

## SSI: Spectral Similarity Index

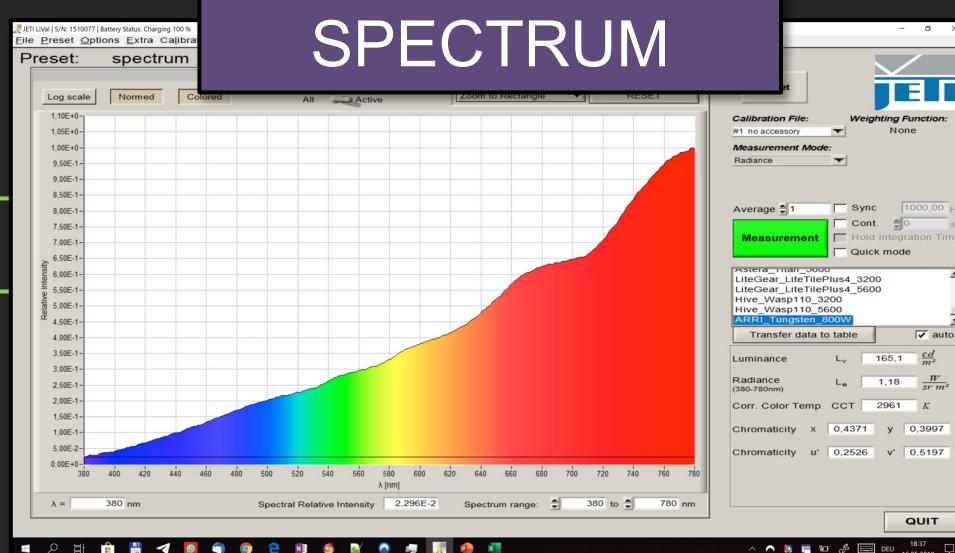

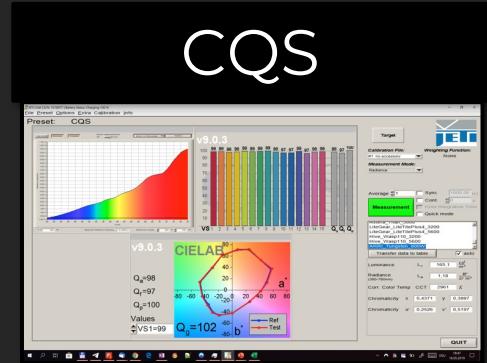

Un index recommandé

A recommended index

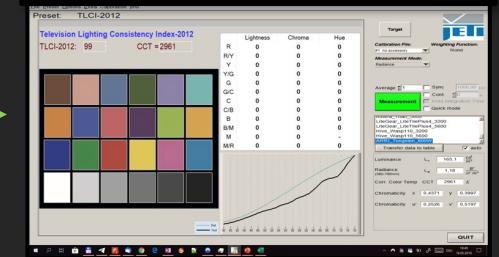

TM-30-18/20

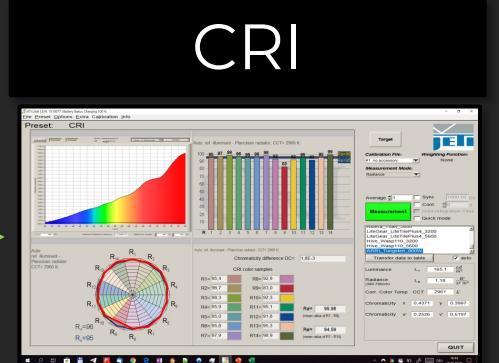

CQS

TLCI/TLMF

CRI

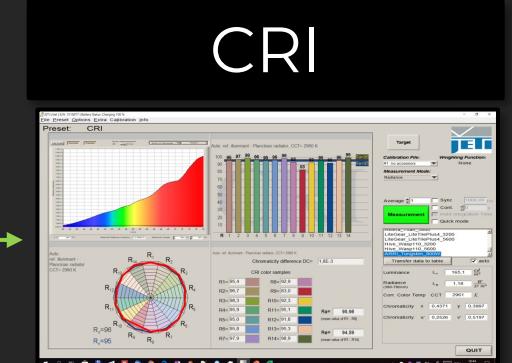

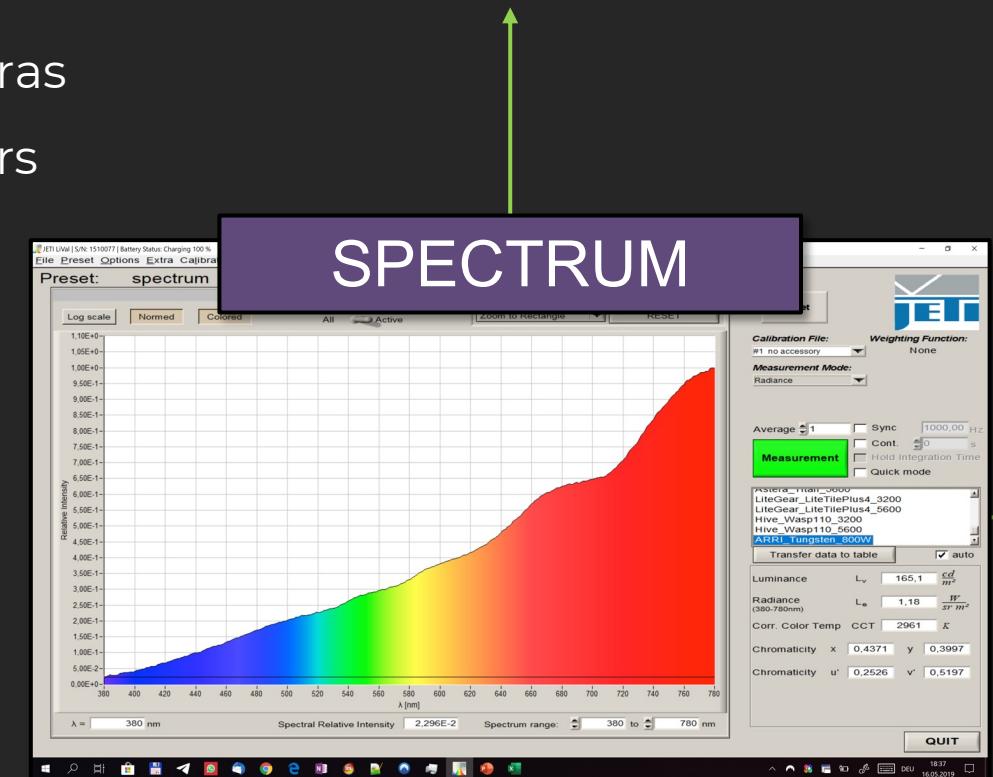

## SSI: Spectral Similarity Index

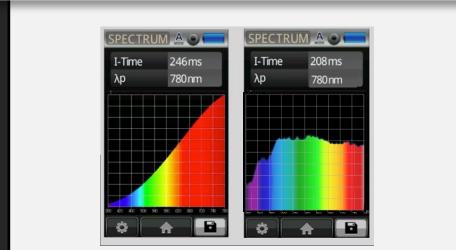

Le CRI n'est plus considéré comme une méthode valable pour mesurer les LED. Il n'est pas représentatif de la façon dont les caméras perçoivent les couleurs

CRI is no longer considered a valid way to measure LEDs. CRI is not representative of how cameras see color

## SSI: Spectral Similarity Index

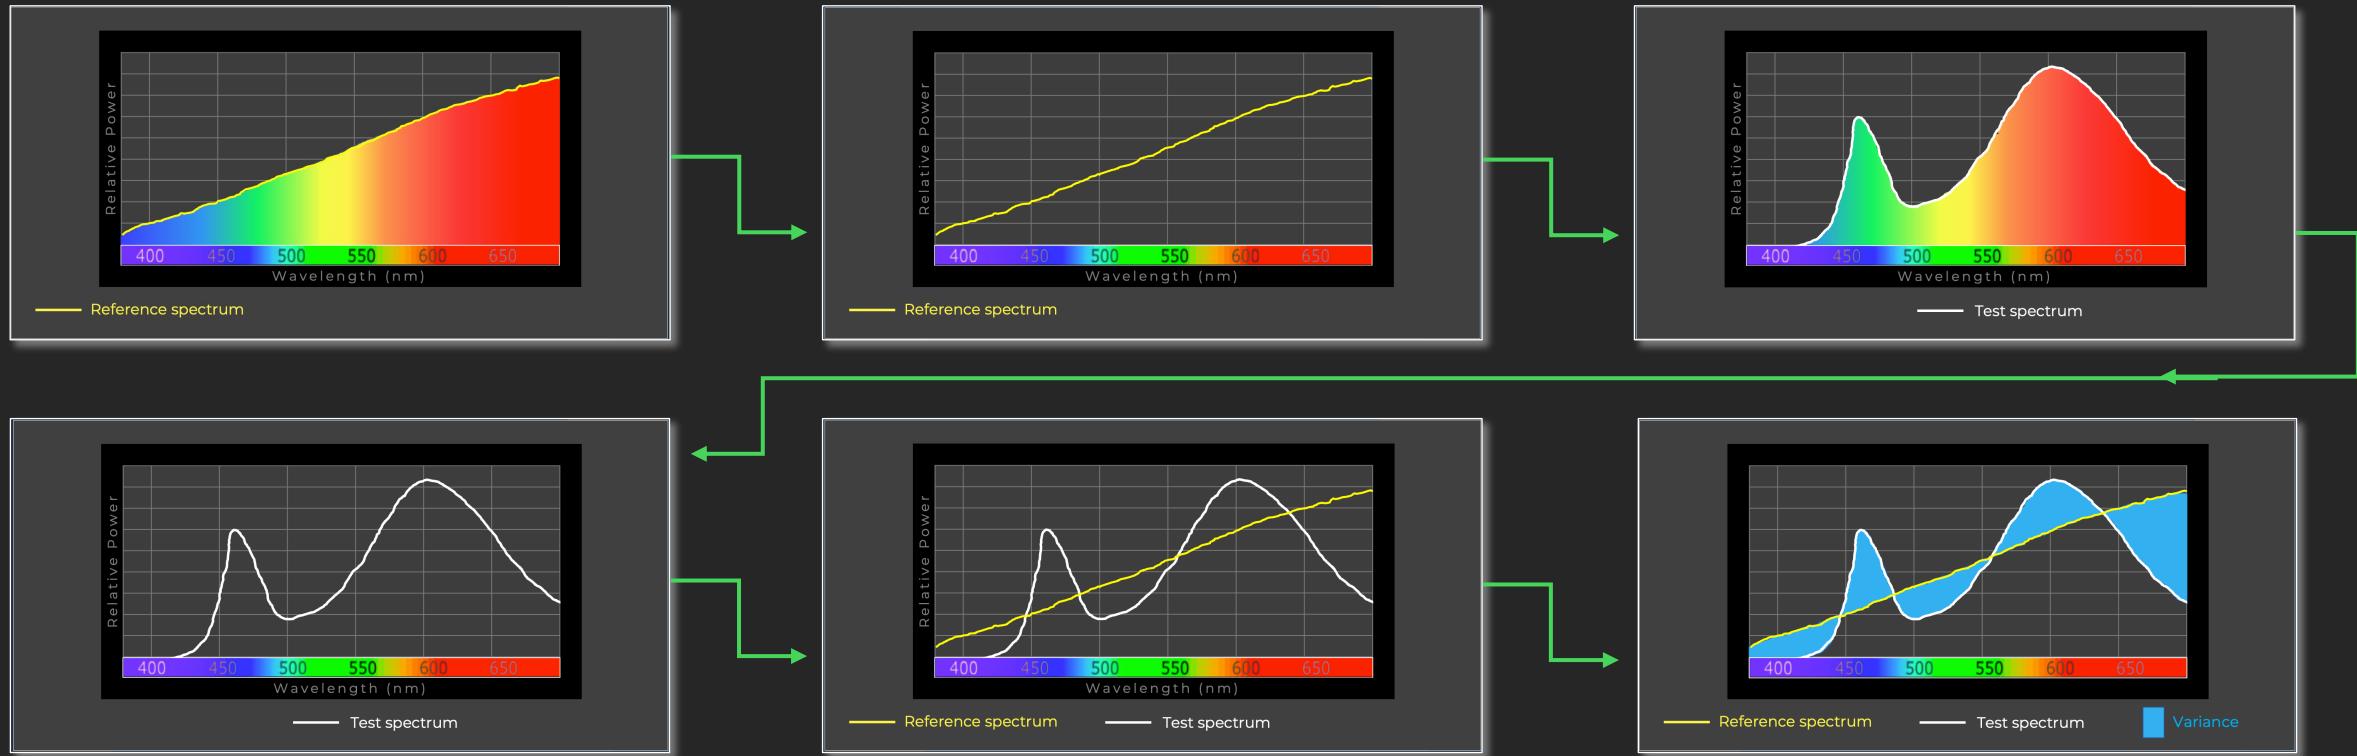

Le SSI compare une lumière LEDs à une lumière de référence connue, couramment utilisée pour l'éclairage de cinéma :

- Éclairage incandescent pour le studio
- Lumière du jour standard

The SSI compares an LED light to a known reference light, commonly used for cinema lighting :

- Incandescent studio light
- Standard daylight

# Journée Très LEDs / A Bright LED Day - Les résultats / The results

- La zone colorée en cyan montre la variance.
- Plus la zone entre les deux courbes est petite, plus la valeur SSI est élevée et plus la correspondance est bonne.

- The cyan-colored area shows the variance.
- SSI essentially scales this variance: the smaller the area between the two curves, the higher the SSI value and the better the match.

## SSI Scores

La valeur SSI est toujours indiquée par rapport à la référence, laquelle est indiquée entre crochets ; exemples :

The SSI value is always denoted with respect to the reference, which is indicated within square brackets; examples:

**SSI**[P3200] **86**

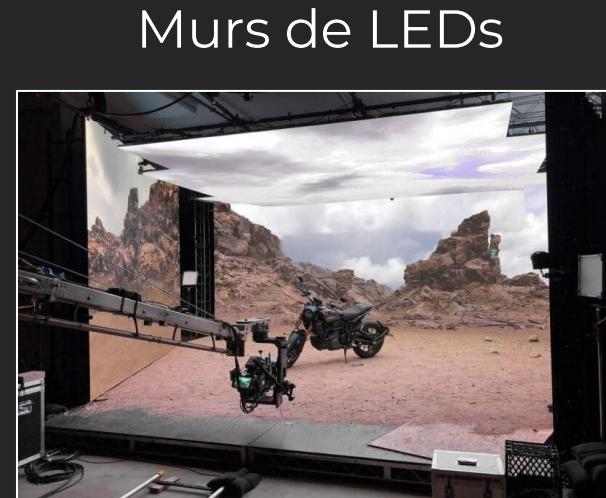

**SSI**[CIE D55] **78**

0 - 70	70 - 80	80 - 90	90 - 100
Problèmes de rendu de couleur Color rendering issues	Problèmes possibles Possible problems	Bon Good	Excellent
			Excellent

Les murs de LEDs ont un très mauvais rendu de couleur.

Ne jamais éclairer de visages avec les murs de LEDs !

## SSI Scores

LED walls

LED walls have a very poor color rendering.

Consequences:

Never light faces with LED walls!

0 - 70	70 - 80	80 - 90	90 - 100
Problèmes de rendu de couleur Color rendering issues	Problèmes possibles Possible problems	Bon Good	Excellent Excellent

# CONNAÎTRE LE TEST ESMERALDA

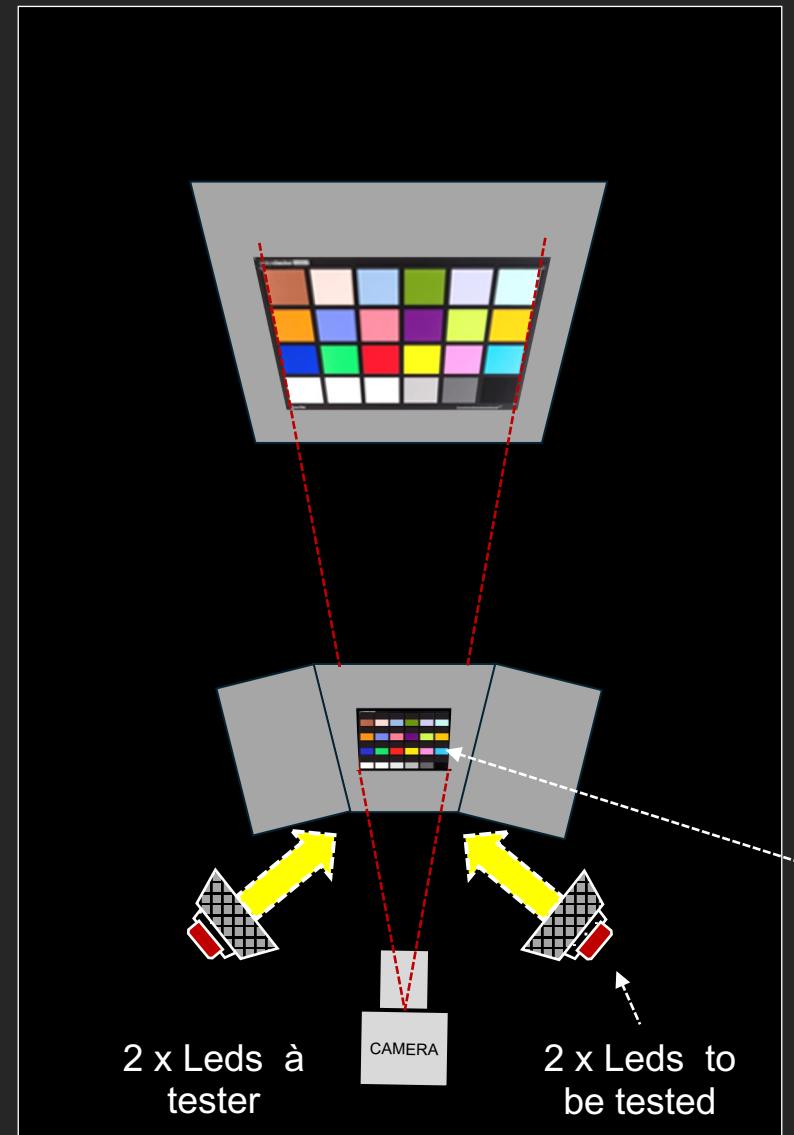

/

## KNOWING THE ESMERALDA TEST

Deux cartes Color Checker  
X-Rite

- Charte au premier plan :  
Eclairée par une source  
LEDs,  
Constituée de carrés de  
couleur dont seule la  
partie inférieure est  
conservée.

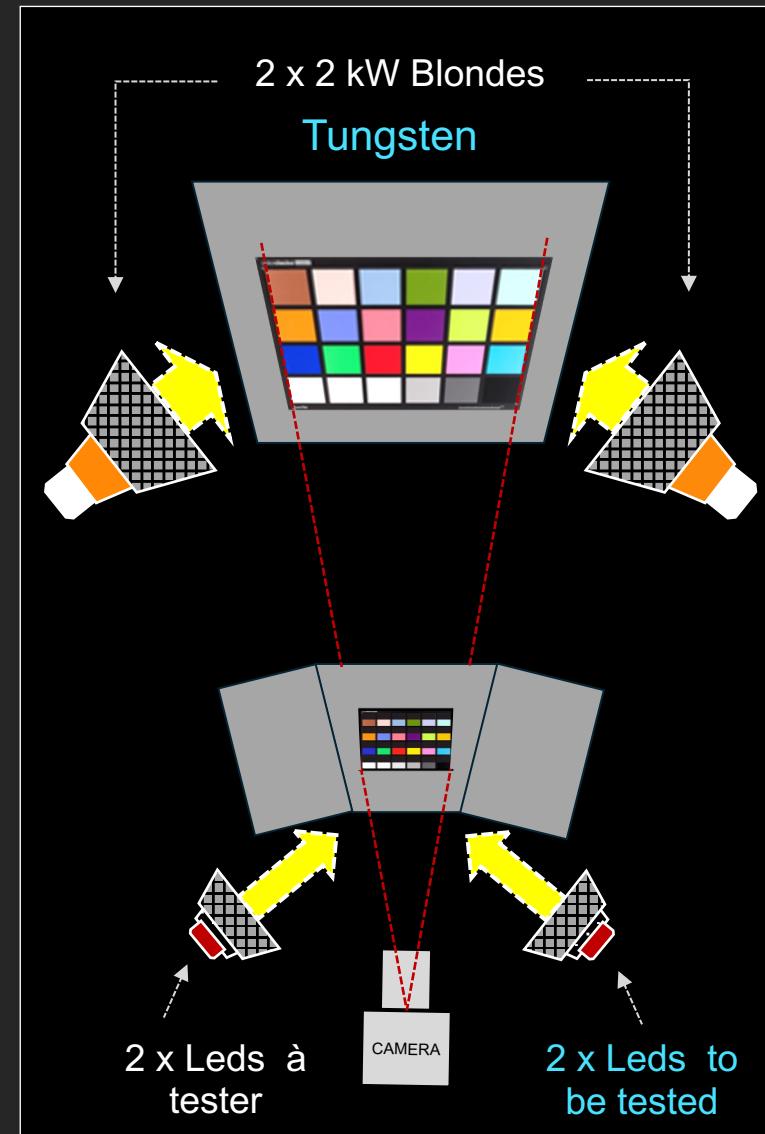

Two X-Rite Color Checker  
charts:

- The first in the foreground  
lit by a LED source consists  
of squares of color with  
only the lower part  
preserved.

Deux cartes Color Checker  
X-Rite

- Charte en arrière-plan :  
De taille supérieure  
Eclairée par une source  
Tungstène qui devient la  
référence.

Two X-Rite Color Checker  
charts:

- The other recessed part allows you to see behind, the second larger chart lit by a tungsten source which becomes the reference

# Journée Très LEDs / A Bright LED Day - Les résultats / The results

Rang du Bas - Premier plan - LED

Lower row - Foreground - LED

Rang du haut - Arrière plan - Tungstène

Upper row - Background - Tungsten

Un test en direct pour juger un projecteur LED / A live test to judge a LED

# PARTAGER LES TESTS

/

# SHARING THE TESTS

Résumé des tests projetés à LA FEMIS :

Summary of tests screened at LA FEMIS:

<https://www.youtube.com/watch?v=HfYiGJHghhQ&list=PLW8aVswX2z2Y6fVtZuJdpemmqlPavU5if&index=4>

# Journée Très LEDs / A Bright LED Day - Les résultats / The results

## But des ces essais / Goal of these tests

- Comparaison entre des plans éclairés avec des projecteurs LEDs à 3200 K et des plans références éclairés en tungstène. Il s'agit d'une référence visuelle.

- Comparison between shots lit with LED lighting fixtures at 3200 K and reference shots lit with tungsten lights. This is a visual reference.

## But des ces essais / Goal of these tests

- Pourquoi choisir cette méthode ?
- Why choose this method?

## But des ces essais / Goal of these tests

- Constat / Notice

- Les projecteurs tungstène ou HMI ne présentent pas de grandes différences de rendu entre eux ce qui n'est pas le cas des projecteurs LEDs

- Tungsten or HMI lights do not present major differences in color rendering between them, which is not the case for LED lights.

## But des ces essais / Goal of these tests

- Constat / Notice

- Chaque marque de projecteurs LED a son propre rendu
- Au sein d'une même marque les rendus de couleur peuvent être différents suivant les modèles de projecteurs LEDs

- Each brand of LED light has its own color rendering
- Within the same brand the color renderings can be different depending on the models of LEDs light

## But des ces essais / Goal of these tests

- Constat / Notice

- Au cours d'un tournage, ces rendus différents peuvent affecter l'image d'un plan

- During filming, these different renderings can affect the image of a shot

## Les contraintes / Constraints

- 3 caméras différentes, pourquoi ?
  - Une seule journée
  - 13 projecteurs
  - Nécessité d'avoir trois mini-plateaux avec trois directeurs photo
  - 3 jours d'étalonnage
- Why 3 different cameras?
  - A single day
  - 13 LED lighting fixtures
  - Need for 3 mini-sets with 3 cinematographers
  - 3 days of color grading

## Méthodologie / Methodology

- Ne pas chercher dans un premier temps à étalonner les caméras entre elles
- Se servir de l'architecture ACES pour pouvoir, si besoin, le faire plus tard
- Do not attempt to calibrate the cameras against each other at first
- Use the ACES architecture to be able to do this later if necessary

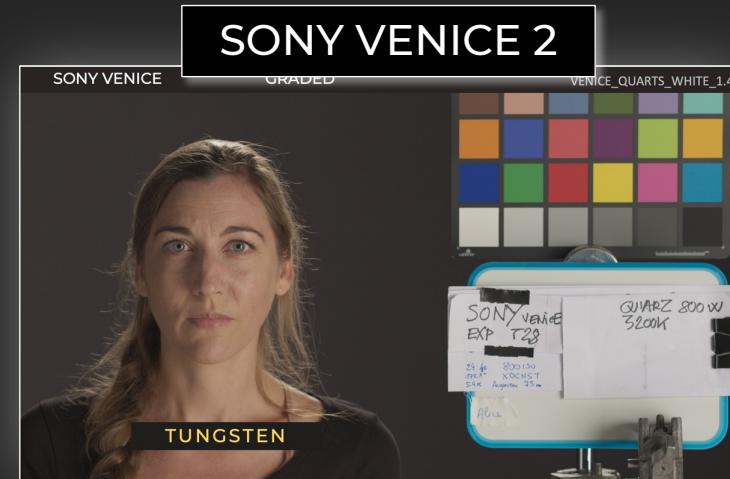

## Méthodologie / Methodology

- Considérer qu'une des caméras est, arbitrairement, la référence : l'ARRI Alexa 35
- Assume that one of the cameras is, arbitrarily, the reference: the ARRI Alexa 35

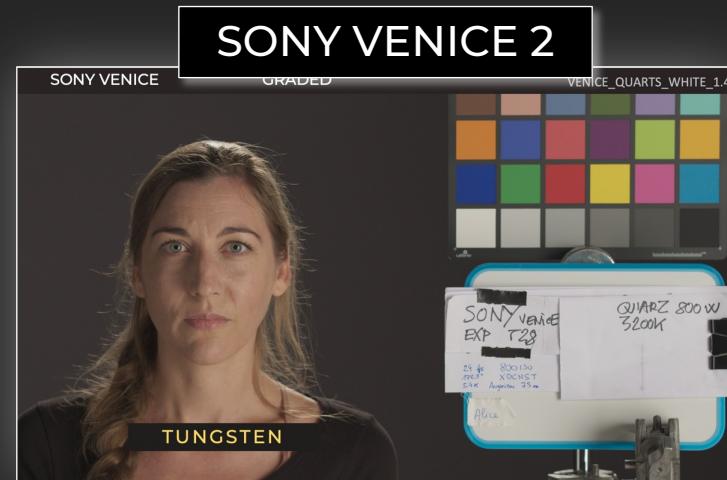

## Méthodologie / Methodology

- Dans le temps d'étalonnage imparti, nous avons décidé :
  - Pour les images issues de la caméra SONY Venice :
- In the time available for color-grading, we decided:
  - For images from the SONY Venice camera:

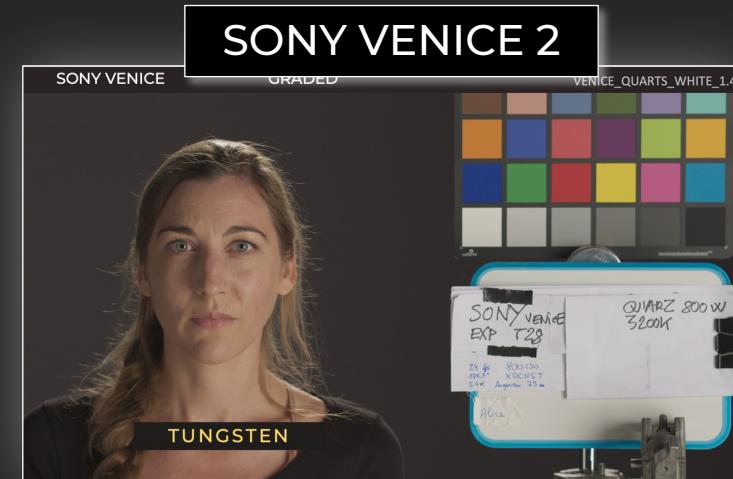

## Méthodologie / Methodology

- D'adoucir la différence de look avec la caméra ARRI et d'en faire un « LOOK » appliqué à la timeline SONY
- Soften the difference in look with the ARRI camera and turn it into a "LOOK" applied to the SONY timeline.

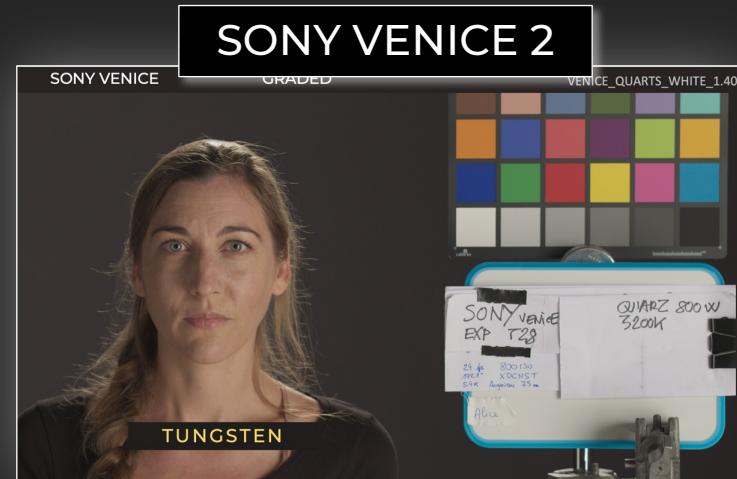

## Méthodologie / Methodology

- Dans le temps d'étalonnage imparti, nous avons décidé :
  - Pour les images issues de la caméra RED Raptor
- In the time available for color-grading, we decided:
  - For images from the RED Raptor camera:

## Méthodologie / Methodology

- D'adoucir la différence de look avec la caméra ARRI et d'en faire un « LOOK » appliqué à la timeline RED
- Soften the difference in look with the ARRI camera and turn it into a "LOOK" applied to the RED timeline.

PLANS DE RÉFÉRENCES  
VISUELLES ÉCLAIRÉS EN

# Journée Très LEDs / Les résultats

LED 1

TUNGSTEN REF

Harmonisation

- Harmoniser un plan éclairé avec un projecteur LED avec un plan éclairé en tungstène (ou avec un plan éclairé avec un autre projecteur LED) est une opération d'étalonnage relativement facile

- Harmonising a shot lit with an LED projector with a shot lit with tungsten (or with a shot lit with another LED projector) is a relatively easy operation in a grading suite

# Journée Très LEDs / Les résultats

LED 2

LED 3

LED 4

LED4

LED 1

## Harmonisation

- En revanche, il est plus difficile d'harmoniser à l'étalonnage des visages qui ont été éclairés avec différents types de LEDs
- C'est la raison pour laquelle il est fortement conseillé de n'utiliser qu'un seul type de LED pour éclaires les visages

- On the other hand, when grading, it is more difficult to harmonize faces that have been lit with different types of LEDs
- That's why we strongly recommend using only one type of LED to light the faces.

- Les différences s'expliquent par les différences de spectre des projecteurs et leurs SSI respectifs
- Afin d'éviter des biais de jugement, nous avons nommé les LEDS par des lettres A, B, C..

Exemples :

- The differences are explained by the spectrum differences of the projectors and their respective SSI
- In order to avoid biases in judgement, we have named the LEDS by the letters A, B, C, etc.

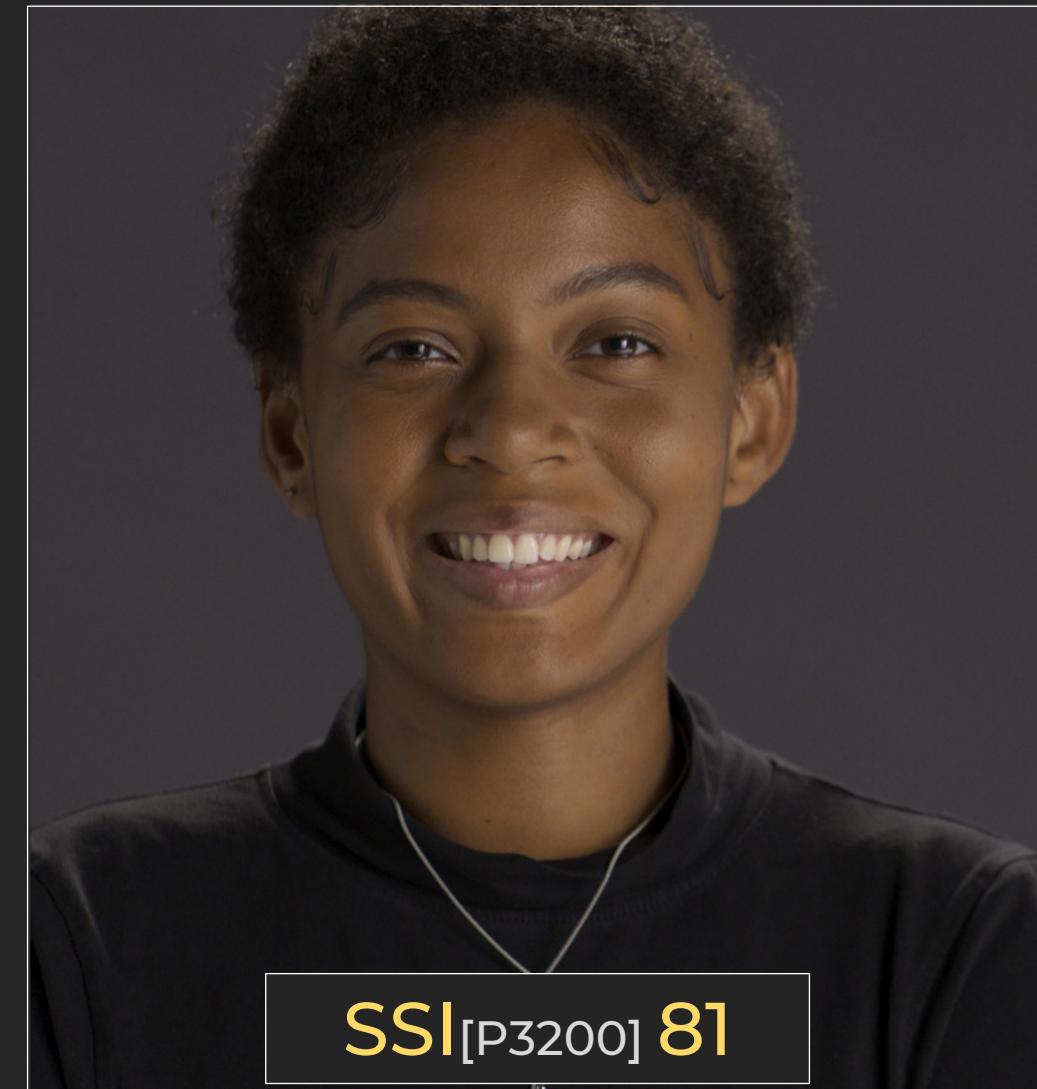

Examples:

## Conclusions

- Les valeurs de SSI sont différentes et ne peuvent pas être reliées à notre jugement sur les images
- Seules la post-production et la valeur du SSI permettent de voir les limites qualitatives des LEDs

- The SSI values are different and cannot be linked to our judgement of the images.
- Only and the post-production and the value of the SSI can show the qualitative limits of LEDs.
